

HOW CAN WE PARTNER WITH YOUR PRACTICE?

Henry Schein® Orthodontics™ Product Catalog

 **HENRY SCHEIN®**
ORTHODONTICS

The New Movement In Orthodontics™

WE BELIEVE WE SHOULD GO BEYOND THE BASICS OF THE SUPPLIER-CLIENT RELATIONSHIP AND CULTIVATE PARTNERSHIPS WITH OUR CUSTOMERS TO DELIVER POSITIVE PATIENT OUTCOMES.

WE BELIEVE THIS BRINGS A SUSTAINED, COLLECTIVE VALUE TO BOTH OUR BUSINESS AND YOURS.

We deliver more than the world-class products you have come to trust over the years — we share your commitment to continuing education, and create partnerships with you that go beyond the supplier-client relationship.

We recognize that being an orthodontic practitioner today requires more than just superior clinical proficiency, it also requires a keen business acumen. That's why we're committed to the development of both. From our innovative products to our vast array of educational forums and practice-building expertise, we provide the tools to help you deliver the best level of orthodontic care to your patients, and to grow your business.

But don't just take our word for it. Come see how our history of success has helped us become one of the fastest growing orthodontic companies in the world.

OUR COMMITMENT TO QUALITY

ISO REGISTERED

Compliance with all International quality requirements.

CE CERTIFIED

Adhering to the letter of the Medical Device Act.

OMA MEMBER

Joining with the Orthodontic Manufacturers Association in a commitment to ensure the industry's goals.

AAOF MEMBER

A partnership in promoting the advancement of Orthodontics.

SLX[™] A-2
Self-Ligating Brackets

Motion[™] A-10
Class II Correction Appliance

INTRODUCING THE *CARRIERE*® SLX BRACKET SYSTEM

The New Standard in Performance. The New Reality in Value.

It's the most exciting news in orthodontic appliance design in years. Introducing the completely re-engineered *SLX* Self-Ligating Appliance System. The *SLX* Bracket System resets the standards for excellence and performance in passive self-ligating brackets with numerous clinician driven innovations for clinical effectiveness and efficiency.

Discover the many innovative features of the *SLX* Bracket System—all designed to meet your ultimate goals—effective case management, optimal tooth positioning, and meticulous finishes.

- **Adhesive Guard Rail™ (AGR) Technology** directs adhesive mesial-distal for faster, easier cleanup

- **Deeper tie wings** for easy, secure chain and ligature use
- **Reduced slot depth** for more precise tooth control
- **Fully-integrated hooks** eliminate the need for drop-in auxiliaries

- **Smooth, secure, and easy-to-operate slides** with audible and tactile cues
- **More vertical and horizontal cues** for faster, accurate placement
- **Sure-Lok™ Clip** for hygienic access and reliable functionality
- **Occlusal opening, uppers and lowers**, to avoid gingival impingement

CARRIERE®
Shifting the way you think about orthodontics.

SLX BRACKET SYSTEM

PERFORMANCE AND FINISHING

Tooth specific bracket widths for improved rotational control

EFFICIENCY – A MATTER OF TIME

Lower profile design for patient comfort and less occlusal interference

YOUR PEERS ARE RAVING ABOUT THE NEW SLX BRACKET!

"The switch from Damon to SLX has been a big win in simplicity, cost, chair time, and treatment outcomes."

– John Stieber, DDS, PS

"SLX Brackets include important design enhancements to improve tooth control and as such, will enable clinicians to take their SL cases to the next level."

– David Paquette, DDS, MS, MSD

"The SLX Bracket System has the features to provide clinicians with greater efficiency, better finishes, and a lower price...I couldn't be happier."

– Michael Ragan, DDS

PATIENT MATERIALS YOUR STAFF WILL LOVE!

SLX Patient Education Brochure

Item Number 999-256

Pack of 15

Get your patients excited about the advantages of *Carriere SLX* treatment. Features before and after photos of actual patients.

15X Model of the SLX Bracket

Item Number 631-713X

Carriere System Educational DVD

Item Number 999-208

Maximize your patient's consultation experience by clearly demonstrating how *SLX* Brackets and the *Motion* Class II Appliance work. You'll find easily accessible images, videos, animations, and brochures that you can print for patients to take home.

Typodont with *Carriere SLX* Brackets

Item Number 631-713

SLX “Zero Force” Opening Tool

It's simply easy to open and close SLX Brackets with the completely new SLX Tool. You'll love how it:

- Seats the wire into the base of the slot to allow ease of door opening
- Provides patient comfort during door opening
- Provides a reciprocal force so that no forces are applied to the bracket
- Operates like a simple tweezer

CARRIERE MOTION CLASS II APPLIANCE

Turn Class II Into Simple Class I Patients

A huge move in the right direction for orthodontics.

To limit extractions and to turn difficult Class II patients into simpler Class I patients is a dream come true for you and your patients. With its sleek, aesthetic, and non-invasive design, the *Motion* Class II Correction Appliance provides greater comfort and shortens treatment time by up to four months. Delivering a natural, gentle, and uniform force for distal molar movement with controlled rotation and tipping correction before brackets or other appliances are placed, the *Motion* Appliance solves complex problems almost effortlessly.

The Motion Philosophy

Fast.

Shortens overall treatment time by up to four months as it treats Class II correction at the beginning of the orthodontic treatment, when there are no competing forces in the mouth caused by brackets or other appliances. A Class II correction can usually be completed in an average of 3-4 months.

Natural.

Mimicking a human hip ball-socket joint, the *Motion* Appliance allows the first molar to rotate and upright in its natural and correct finishing position, producing a continuous, natural, and uniform force for distal molar movement with controlled rotation and tipping correction. Built-in stops engineered in the appliance prevent the molars from over-rotating and the crowns from distal tipping. The *Motion* Appliance's low forces are biologically compatible during the Class II treatment.

Gentle.

The low force of the *Motion* Appliance is gentle on your patients, and its low profile design is very comfortable to wear. By treating the Class II platform first, it simplifies the entire treatment for you, and provides greater comfort for your patients.

GOING FROM CLASS II TO CLASS I HAS NEVER BEEN EASIER.

The *Motion* is a direct bond appliance that attaches to the maxillary canine and first permanent molar, providing a simple procedure for turning complex Class II patients into a Class I platform. Once a Class I condition is achieved, malocclusions become easier to treat and can be finished with your preferred orthodontic technique. Since there are no competing forces in the mouth when using this appliance, average Class II correction can usually be achieved in just three to four months.

- Eliminates wire changes and the distorting collateral forces that appear with every wire activation used in traditional methods.
- Minimizes root resorption.
- Patients are treated faster with less discomfort.
- High level of patient compliance as the appliance is aesthetically pleasing, and used during the initial phase of treatment when patient's motivation is still high.

Fig A
Motion Appliance with *Carriere* Oral Elastic attached to hook on the cuspid pad. Class I Platform is present when a cuspid occlusion, in which centric relation coincides with centric occlusion, and the molar occlusal relationships are a perfect Class I.

How it Works.

- Corrects the posterior occlusion to an ideal Class I platform first by rotating and uprighting the maxillary first molars while distalizing the posterior segment, from canine or premolar to molars, into a perfect occlusion.
- Simultaneously produces a light, uniform force for distal molar movement.
- Independently moves each posterior segment, from canine or premolar to molar, as a unit.
- Used at the beginning of treatment when there are no competing forces in the mouth allows the distalization of the molars and premolars from 3 to 6 mm range, on average.

Indications.

- Most effective in treating Class II symmetrical and asymmetrical malocclusions without the need for extractions.
- May also be used in many Class I patients with mesially positioned maxillary molars.
- Growing patients are ideal, but adults may be treated as well.
- Mixed dentition Class II patients with fully erupted molars are candidates for Phase 1 treatment to establish a Class I platform.

EASE OF PLACEMENT.

The *Motion* Appliance is placed on the maxillary arch, but requires a solid and consistent source of anchorage in the mandibular arch to avoid protrusion of the lower incisors (a lower Essix Appliance with direct bonded tubes on lower molars, a passive lingual arch, a full mandibular fixed appliance, or mini-screws). Once the appliance is bonded, the *Carriere* Oral Elastics are attached from the mandibular molar to the hook of the maxillary cuspid of the *Motion* Appliance to activate.

The Movement Created by the Motion Appliance.

Bodily distalizes the maxillary posterior segments as a block while correcting upper first molar rotation and uprighting. The posterior portion of the *Motion* Appliance accomplishes three types of molar movement:

1. Uprighting of the crown, if it is mesially inclined (*Fig. 01*). Once the molar has been uprighted, the articulation of the ball with the socket prevents distal tipping.
2. Distal rotation around the palatal root. When the maxillary first molar is mesially rotated around the palatal root, the molar occlusion may appear

to be Class II, while in reality it is Class I with the canines in a cusp-to-cusp relationship (*Fig. 02*). When the molar has been de-rotated, the shoulder of the posterior base contacts the mesial arm to prevent over-rotation.

3. Distal displacement without concurrent distal tipping of the crown.

Fig 01 – Provides controlled molar rotation and uprighting.

Fig 02 – The maxillary molars are distalized and rotated, providing a platform for maxillary canines to occlude in a Class I relationship.

Fig 03 – With mesially rotated molars, cuspids cannot occlude in Class I relationship.

Fig 04 – Independently moves each posterior segment, from canine or premolar to molar, as a unit.

MAESTRO Low-Profile Bracket System

Discover the precision, comfort, and control of the MIM-Manufactured Maestro Bracket

The *Maestro* Low-Profile Bracket System harmonizes the enduring precepts of classic orthodontic design with state-of-the-art engineering and production practices. The result is a complete orthodontic appliance system with corresponding buccal tubes—contemporary in form and function—that achieves the optimum in metal aesthetics and comfort that patients seek without sacrificing the precision and control that practitioners need. A finely tuned appliance design for predictable, efficient treatment, and discerning finishes.

Metal Injection Molding (MIM) is advanced technology for manufacturing complex metal products. Fine metal powders and wax binders are injected into intricate molds. After the wax binders are removed, the brackets are sintered to form a high-density orthodontic appliance with extremely close tolerances that accurately replicates the intricacies of the original mold. MIM translates into rounded contours, and complex structures that machined brackets cannot duplicate providing corrosion resistance, strength, and proven performance.

Quality Features Include:

Lowest Possible Profile

reduces occlusal interferences

Smooth Rounded Surfaces

ensure patient comfort

Contoured Archwire Slot

Edges Mesial-Distal reduce friction

In/Outs Built-In, Not

Machined for precision and consistency

Small Footprint

is less bulky than conventional twin brackets, minimizing the look and feel

The Maestro Bracket offers multiple visual cues to enhance precise bracket placement

The geometries of the *Maestro* Bracket are specifically designed to provide signposts which assist you in positioning brackets in their ideal location.

Specific Bracket

Geometries, such as in this lower lateral bracket, further guide the eye for placement accuracy

Rhomboid-Shaped Brackets and Pad align with tooth edges

Vertical Aspects Follow Long Axis of the Tooth

Constant Occlusal-Gingival Heights across the system foster placement repeatability

Horizontal Aspects Run Parallel to Occlusal Plane

Long Axis Scribe Line not only runs the entire length of the pad, but also the bracket for an accurate placement cue

MAESTRO LOW-PROFILE BRACKET SYSTEM

In-depth research on tooth morphology supports superior engineering for a finely tuned design and finishes

Anatomically contoured base and pad nestle each tooth for positioning that feels right

80-gauge micro-etched bondable mesh pad offers proven bond adhesion

Small profile is balanced with deep tie-wing undercuts that secure ligation

Torque-in-base provides level slot lineup, and helps avoid occlusal interferences

Optional gingivally offset brackets, on large bonding bases of bicuspid, minimize bond failures

Optimized mesial-distal width offers superb rotational control

The *Maestro* Bracket is available in both the Roth prescription, and the McLaughlin, Bennett, and Trevisi prescriptions, in .018" and .022" lumen sizes. Ball hooks are optional on laterals, cuspids and bicuspid brackets; and each bracket is color-coded with an ID mark for easy identification.

Maestro: A complete 7x7 system

Maestro Buccal Tubes complete the appliance system. The 80-gauge mesh pad, compound contoured base, and defined buccal indent, provides you with the precise control needed throughout all phases of treatment. The large funneled entrance, side-grip areas, and color-coding make for easier identification, placement, positioning, plus wire insertion. The patient will have one of the most comfortable experiences with its smooth shape, low profile, rounded edges, and lowered hook. The *Maestro* Buccal Tube orchestrates all components of the system seamlessly, providing reduced chair time and increased satisfaction for both practitioner and patient.

Maestro Buccal Tubes—bondable and weldable—are engineered to provide a complete and seamless appliance system

OPTIONS FOR METAL/AESTHETIC BRACKET KITS

To help simplify your ordering process, we have developed 5x5 kits that are composed of both aesthetic and metal brackets. You will receive aesthetic brackets, based on your choice of either *NeoCrystal* or *NeoLucent Plus* Ceramic Brackets, for the 3x3 section, and *Maestro* Brackets for the bicuspids.

All kits U/L 5x5 (3x3 aesthetic brackets with metal brackets on 4's and 5's. Hooks on 3's, 4's, and 5's)*

ANDREWS² APPLIANCE SYSTEM “THE NEW GENERATION” STRAIGHT-WIRE APPLIANCE

Scientific • Effective • Efficient

The *Andrews²* Appliance is comprised of both standard and translation brackets. Teeth that do not require translation are assigned standard brackets. Teeth that need to be translated mesially or distally are assigned translation brackets – minimum (T1), medium (T2), or maximum (T3) depending on the distance the teeth need to be translated.

Andrews² Brackets can be prescribed individually or by pre-arranged set. There are 11 sets for the maxillary arch and 10 for the mandibular arch. Arch correction efficiency is maximized when the most appropriate brackets are prescribed, properly sited, and the most suitable archwires and forces are applied. When used as such it becomes a **fully-programmed** appliance.

Properly prescribed and sited *Andrews²* Brackets will assist you in getting where you want to go as fast as is biologically possible, with the least amount of effort.

Orthodontic Science Realized

The *Andrews²* Appliance has tooth guidance built into the brackets rather than into archwires. It is based on recognition of the extensive similarities in tooth morphology between individuals with normal teeth, and in the tooth positions of individuals with naturally optimal dentitions. The *Andrews²* Appliance exploits these similarities by utilizing special design features that minimize wire bending while enhancing ease-of-use.

Building upon the original Straight-Wire Appliance, the Andrews Foundation has developed an improved appliance system which is a result of 20 years of research and development. We are the proud, exclusive manufacturer and distributor of the *Andrews²* Appliance. The Company has worked closely with Drs. Larry and Will Andrews to develop the Andrews products to the exact, high-quality specifications every patient deserves.

Quality and Precision

The *Andrews²* Appliance is manufactured at our headquarters in Carlsbad, CA ensuring exact precision. Experts conduct quality assurance inspections, and the latest technologies are used throughout the manufacturing process. The appliance is made through the Metal Injection Molding (MIM) process, which is an advanced technology used for the manufacturing of complex metal products. MIM translates into rounded contours, and other complex structures that machined and cast brackets may not be able to duplicate.

Andrews² Brackets Offer Unique Convenience Features

The instrument channel is wider at the center of the bracket to allow a carver instrument to finely adjust and control bracket positioning.

The de-ligation saddles allow for easy removal of elastic ligatures. The design is a "scoop" out of the bracket stem above and below the archwire slot which allows access for an explorer type instrument.

The stem of the bracket body is positioned 90° to the archwire slot which allows for a more aligned rotational force of an auxiliary wedge against the archwire.

Access bevels on each of the four tie-wings allow ease of removal of metal ligatures from any angle.

ANDREWS² ARCHWIRES

Optimal arches are essential for optimal occlusion. Andrews² Archwires have the features needed to treat arches to optimal standards efficiently.

- .014, .016 Nitanium[®] Super Elastic Wires have flexibility for initial aligning and rotations
- .014, .016 stainless steel wires have a balance of flexibility and rigidity for initial aligning and leveling
- .016, .018 stainless steel wires have a balance of flexibility and rigidity for leveling, correcting arch shape, and for mesiodistal translation
- .018 x .025 Orthology-Blue (heat treatable) stainless steel wires are for inclining and fine tuning

Flexibility:

Arches can be effectively and efficiently treated to optimal standards by using the most appropriate Andrews² Appliance prescription in combination with the most suitable Andrews² Archwires in terms of flexibility.

Shape:

The Andrews² Archwires are preformed to match the average shape of the 120 non-orthodontic normal study casts used in the "Six Keys to Normal (Optimal) Occlusion" study. Like any preformed archwire, its shape must be customized to each patient's unique anatomy.

Length:

The overall length can usually be customized with one cut.

Pre-Posted Archwire Option:

For each arch, the small, medium, and large distances between the posts means one of the 3 will fit 90% of the normal patient population.

Andrews² Archwires are great for use with the Andrews² Appliance.

Andrews² Arch Form

Translation Brackets

When teeth require mesial or distal bodily movement, translation brackets have significant advantages over standard brackets.

Translation brackets include all of the qualities and features of standard brackets, plus a power arm and built-in counter-angulation and counter-rotation. Collectively, the width of the brackets, length of the power arms, and the counter-angulation direct forces close to or at the tooth's center-of-resistance. This allows for effective bodily movement and the right amount of over correction (angulation and rotation) when using flexible archwires and sliding mechanics.

ELITE OPTI-MIM MINI-TWIN Bracket System

Imitates a natural tooth shape for superior performance

Elite Opti-MIM Mini-Twin Brackets feature a patented tooth-shaped design resulting in a smaller bracket, which delivers uncompromised strength and control throughout the treatment process. Each fully programmed bracket has a compound-contoured base for better bracket to tooth fit. All brackets are manufactured with our *Nickel-Lite*[®] stainless steel (Cobalt Chromium Alloy) material to protect nickel sensitive patients.

Single-Piece Durable Construction

The contour of the bracket allows for an optimum fit on the tooth.

Color-coded ID System

For easy identification.

Precise Vertical Scribe Line

Allows for easy alignment with the long axis of the clinical crown.

Accurate Placement

Distal tie wings are parallel to distal tooth anatomy.

Effortless Archwire Changes

Beveled edges of archwire slot provides ease of placement and removal of archwires.

Accurate Placement

Mesial tie wings are parallel to mesial anatomy.

True Straight Arch System

Advanced engineering is incorporated into each bracket and buccal tube with torque-in-base.

Elite Opti-MIM Mini-Twin One-piece Bracket offers unsurpassed quality and ease-of-use:

- Available in Roth, Nanda, and McLaughlin, Bennett, and Trevisi prescriptions*
- Torque-in-base allows precision and control of torque
- Each *Elite Opti-MIM* Bracket and buccal tube feature our patented micro-etched *Grip-LOK* Base for greater bond strength and reduced bond failure
- Both the regular and low-profile *Elite Opti-MIM* Brackets are radiused and polished for maximum patient comfort
- Mesial and distal tie wings are parallel to the tooth's anatomy giving the clinician an additional reference point for accurate placement
- Low-profile first and second mini molar tubes feature a stronger bond strength and reduced bond failure**
- Brackets sold individually or in patient sets for easier inventory control

Di-MIM MINI-TWIN Bracket System

Achieve the Ultimate in Control and Comfort

The low-profile *Di-MIM Mini-Twin* Bracket's rhomboid shape is specifically designed to position the bracket easily and accurately. The bracket's vertical components give fast, accurate alignment with the long axis of the clinical crown, while the horizontal elements are aligned and parallel to the incisal edge of the tooth. All brackets are manufactured with *Nickel-Lite* (Cobalt Chromium Alloy) Material to address your nickel sensitive patients.

Quality Features Include

Color-Coded ID System

Each bracket is individually color-coded for easy identification.

Accurate Placement

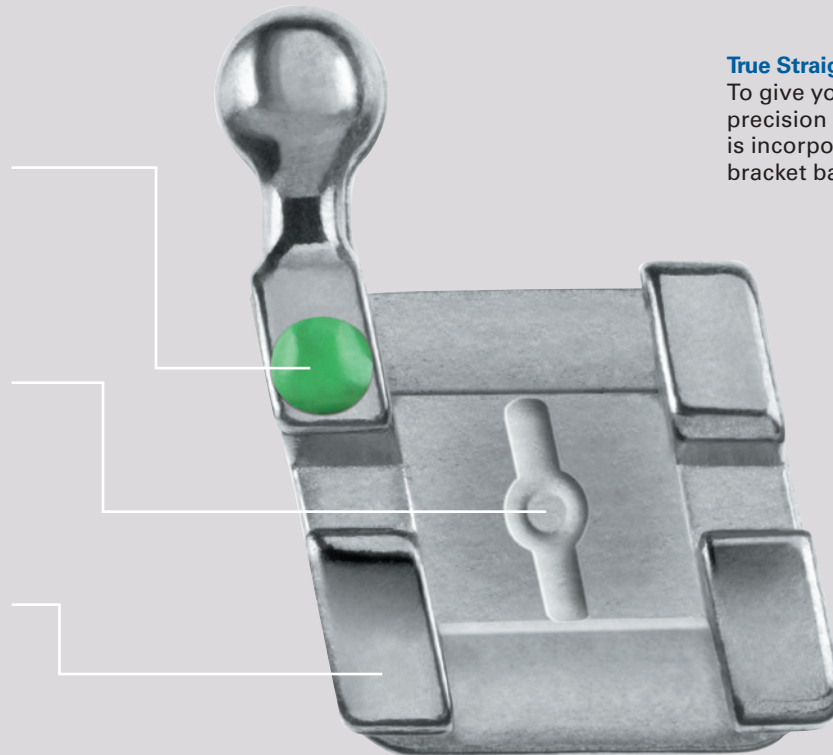

Mesial and distal tie wings and a permanent vertical scribe line are parallel to the long axis of the clinical crown – The vertical and parallel lines facilitate a more accurate placement of each bracket on the long axis for bonding.

Ease of Use

The parallel tie wing design allows tweezers, or bracket holders, to securely hold the bracket in place during bonding.

True Straight Archwire System

To give you ultimate precision and control, torque is incorporated into each bracket base.

Easy Archwire Changes

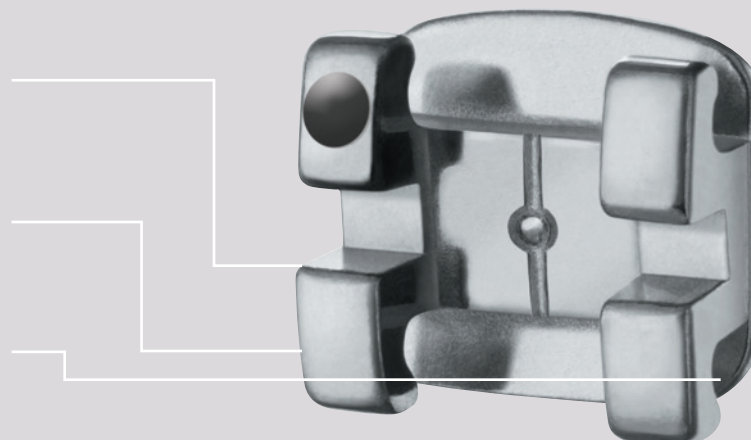

Beveled edges of the archwire slot provides easy placement of the archwire.

Patient Comfort

Brackets are radiused and polished for maximum patient comfort.

Easy Ligation

Ample area under each tie wing allows easy ligation.

Offers outstanding performance for patients & practitioners

Exceptional Clinical Results and Case Finishing:

The accurate placement of the bracket can translate into a more exact finish and consistent end result. You will truly appreciate the beautiful case finishing that may be achieved with the *Di-MIM* Bracket!

Patient Comfort and Aesthetics:

The *Di-MIM* Bracket is designed with your patient in mind. Its small shape, reduced bracket height, and smooth, radiused tie wings offer your patient an aesthetic look and comfortable feel.

Perfect Fit:

Each *Di-MIM* Bracket Base is contoured in both the mesial-distal, and gingival-occlusal directions for a more “glove type” fit to the tooth surface. The compound, contoured bracket base reduces bracket rock and adds to the bond strength.

Biocompatible Material:

The bracket is biocompatibly manufactured from cobalt-chromium alloy, which is a *Nickel-Lite* Material reducing the risk of allergic reactions for your nickel sensitive patients.

Can be Ordered Based on Doctor’s Prescription Preference:

Available in Roth, Nanda, and McLaughlin, Bennett, and Trevisi Prescriptions*, in .018 and .022 slots. The bracket may also be ordered with optional rounded and smooth hooks on 3’s, 4’s, and 5’s. In addition, the *Di-MIM* Bracket works well with all the new high technology wires and arch forms, making them very adaptable for each doctor’s personal preference.

Optimal Mechanical Characteristics:

The MIM process (Metal Injection Molding), together with the one-piece design, increases the strength, accuracy, and durability of the *Di-MIM* Bracket. It features our patented micro-etched *Grip-LOK* Base, to increase greater bond strength and reduce bond failure.**

SEM of Di-MIM Micro-Etched Grip-LOK Base

Rhomboid Shape Design

- Mesial and distal tie wings are parallel to long axis of clinical crown
- Vertical scribe line aligns with long axis of clinical crown
- Archwire slot and base are parallel to incisal edge of tooth

ELITE MINI-TWIN AND ELITE MEDIUM-TWIN BRACKETS

Both the *Elite Mini-Twin* and the *Elite Medium-Twin* Brackets provide the following features:

- 80 gauge mesh bondable pad for exceptional strength
- Micro-etched base to maximize bond adhesion
- Patented tooth-shape design
- Torque-in-base, compound/contour design
- Five visual references to ensure accurate placement
- Color-coding and permanent I.D. marks
- Metal Injection Molding (MIM) process
- Available in both Roth and Andrews' (Classic) prescriptions
- Available in .018 and .022 slot sizes
- Ball hooks are available on all cuspid and bicuspid brackets-upper bicuspid hooks are mesial-lingival, all other hooks are distal-lingival

Elite Mini-Twin Brackets

- 30% smaller than standard brackets

Elite Medium-Twin Brackets

- 15% larger than the *Elite Mini-Twin* Bracket

Elite Mini-Twin Bracket

Etched

Non-Etched

All *Elite Mini-Twin* Brackets and *Elite Medium-Twin* Brackets have Micro-Etched Foil Mesh Pads for Exceptional Strength

Offset Pad Bicuspid Brackets

Elite Offset Pad Bicuspid Brackets feature a special lingual offset that greatly reduces the chance of bond failures.

Upper View

Lower View

Anti-Rotation

Anti-rotation is available for cuspid and bicuspid brackets.

Note: Anti-rotation is only available on *Elite Medium-Twin* Brackets.

ELITE MINI-TWIN VERTICAL SLOT BRACKETS

Offering the same great benefits as the Elite Mini-Twin Bracket, with a vertical slot

- .018 x .018 vertical slot accepts rotation springs, power pins, and uprighting and torquing springs
- Low-profile design
- Metal Injection Molding (MIM) process
- Straight arch system compound/contour design with torque-in-face
- 80 gauge mesh bondable pad for exceptional strength
- Micro-etched base to maximize bond adhesion
- Available in Roth and Cetlin prescriptions
- Available in .018 and .022 slot sizes

Elite Mini-Twin Vertical Slot Brackets Auxiliaries

Rotation Springs

Short Counter-Clockwise

- 105-040 (10 per pack)

Short Clockwise

Short rotation springs are for use with lower anteriors.

- 105-041 (10 per pack)

Medium Counter-Clockwise

- 105-044 (10 per pack)

Medium Clockwise

Medium rotation springs are for use with all teeth, except lower anteriors.

- 105-045 (10 per pack)

ELITE MINI-TWIN VERTICAL SLOT BRACKETS AUXILIARIES

AUXILIARIES CONTINUED

Uprighting Springs

Counter-Clockwise

- 105-050 (10 per pack)

Clockwise

- 105-051 (10 per pack)

Power "T," Distalizing Pin

Featuring 15° labial inclination, Power "T" Pins can be used as lefts or rights. Stamped .018 stainless steel. (Bend tail of pin away from elastic force pull.)

- 105-060 (50 per pack)

Anterior Torquing Spring

Generate more positive torque in the upper incisors. The device ends hook distally to each upper central bracket and the center (coil) circle is pressed into the archwire.

- 105-064 (5 per pack)

Putting you in the driver's seat for ultimate control

Quality Features Include

Smooth Radiused Ball Hook
To facilitate elastic placement

Centered Scribe Line
For accurate bracket placement

Single Gingival Ligature Post
Maximizes archwire expression

Center Post
For low friction mechanics

Extended Mesial and Distal Posts
To support ligature ties

Micro-Etched Grip-LOK Mesh Base
Provides maximum retention

Beveled Slot
Enables easier archwire insertion

Triple Occlusal Tie Wing
For maximum rotational control

The Delta Force Bracket System allows you ultimate control:

- Incisor torque – Upper incisor brackets provide additional lingual root torque, while lower incisor brackets provide labial root torque. These adjustments assist in providing a full smile at the end of treatment
- One-piece metal injection molded bracket eliminates the bracket and pad separation
- *Nickel-Lite* Material for nickel sensitive patients
- Low profile for increased patient comfort and better oral hygiene
- Micro-etched *Grip-LOK* Base improves bond strength, thereby reducing bond failures
- Brackets sold individually or in patient sets for easier inventory control

Delta Force Bracket,
Grip-LOK Base

DELTA FORCE BRACKET SYSTEM

VARIABLE FORCE ORTHODONTICS

The *Delta Force* Bracket System incorporates an advanced design that allows you to control the friction between the archwire, bracket, and ligatures. This bracket allows for variations in ligature placement while providing full control over the sliding mechanics and offering the ability to easily increase or decrease friction for better treatment planning and results.

Delta Force Brackets have unique features to achieve variable force ligation throughout the treatment stages.

Early in treatment: Light force can be attained for excellent sliding mechanics and low friction.

Intermediate stage of treatment: Medium force can be utilized for anchorage and stabilization, as well as initial torquing forces.

Final treatment stage: Maximum force can be attained to provide precise finishing and detailing of the occlusion.

A combined single/twin bracket, the *Delta Force* Bracket has a unitary body featuring a gingival ball hook, mesial-distal ligature post, as well as three occlusal tie wings, allowing greater inter bracket width. This configuration provides maximum archwire deflection for quick and easy ligation to irregular teeth. Plus, the triangular design gives the low friction advantages of a narrow bracket with the rotational control of a twin bracket. Variable ligation makes it possible to use a full rectangular wire earlier in treatment for torque control.

Enjoy the technical benefits of ligature placement and reduced archwire changes, while providing your patients more satisfaction. Plus, the low-profile design offers increased patient comfort and better oral hygiene.

Fig A

Minimum Force

Start your treatment with passive ligation for minimum force. Rapid leveling and aligning can be attained as the ligation is configured to prevent the ligature from directly contacting the archwire. The free sliding mechanics created result in low friction and more patient comfort during this early phase of treatment (Figure A – minimum force).

Fig B

Medium Force

In the next stage, medium force is achieved through limited contact of the ligature and the archwire. This configuration uses a standard ligation, full tip, torque and rotational control through lightly seating a rectangular archwire (Figure B – medium force).

Fig C

Optional Step – Rotation Control and Force

If necessary, extra rotation can be created by ligating behind one tie wing on one side. Please note, rotation will occur towards the non-ligated wing (Figure C – rotation ligation).

Fig D

Maximum Force

You may finish your treatment with maximum force by locking the archwire in for full expression of the straight arch bracket. Tie the ligature to lock the archwire in the tip, torque, and rotational control (Figure D – maximum force).

Fig E

Maximum + Force

If needed, for full expression of the straight arch bracket system, you can apply maximum + force, by placing an inverted V elastic ligation (Figure E – maximum + force).

DELTA FORCE BRACKET – A CHANGE FOR THE BETTER

Fig 1 Archwire Deflection

The reduced mesial-distal width of the gingival ligature post on the unitary body allows the archwire to be easily flexed into the bracket slot, especially in severe malocclusion cases (Figure 1).

Accurate In-Out Alignment

Individual bracket thickness is designed into each *Delta Force* Bracket (labial-lingual) reducing the need for 1st order (in/out) wire bends.

Fig 1

Fig 2 Torque in Base

Torque is incorporated into each bracket to provide you with ultimate precision and control. The brackets are also anatomically contoured (mesial-distal/occlusal-lingual) for an accurate fit of each individual tooth. In addition, the design promotes level slot line-up (Figure 2).

Torque Control

Torque in the mandibular bicuspid brackets and molar buccal tubes has been reduced to -12 degrees to reduce unwanted lingual dumping in the mandibular arch.

Fig 2

Fig 3 Rotational Control

The occlusal tie wings of the *Delta Force* Brackets are designed to be as wide as the tie wings on the *Elite Mini-Twin* Brackets to maximize rotational control (Figure 3).

Fig 3

Fig 4 Reference Points

Each bracket has three reference points for fast and accurate placement. A center scribe line aligns with the long axis of the clinical crown. The archwire slot and occlusal base line up with the occlusal tooth surface (Figure 4).

Fig 4

Fig 5 Power Hook

Nickel-Lite Cuspid Brackets with optional power hooks are available for increased efficiency in closing spaces and retracting anterior teeth (Figure 5).

Fig 5

Fig 6 Aesthetics Line

Delta Force Brackets are also available in ceramic providing patients with a fully translucent, natural look. They are made from pure Polycrystalline, and crafted to resist breakage (Figure 6).

ANCILLARY PRODUCTS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Delta Force Bracket Placing Tweezer/Slot Aligner</p> <p>Designed to fit the unique shape of all <i>Delta Force</i> Brackets. A notch on each side of the tip captures the angles on the bracket body just under the occlusal tie wings. This holds the bracket securely, without shifting, or risk of popping out. Tweezer tips rest just above the base flange, providing a firm surface to push against while seating the bracket. This reverse action tweezer also has a narrowed tip that can be placed in the archwire slot for aligning and adjusting.</p>	<p>200-322DF</p>
	<p>Rotation Wedges</p> <ul style="list-style-type: none"> • Specifically designed for use with the <i>Delta Force</i> Bracket System, the simple opening actually fits around the entire perimeter. The wedge portion provides the pressure to efficiently rotate the tooth • Available in silver and clear (50 per pack) 	<p>400-302 • Silver 400-303 • Clear</p>
	<p>Maxi-Tie Ligatures</p> <ul style="list-style-type: none"> • Larger than the standard ligature – gives extra space and flexibility with increased elasticity • Use when ligating for maximum + force with inverted V elastic ligation for full expression of the straight arch bracket system • Available in clear and silver • 10 ligatures per stick (10 sticks per pack) 	<p>400-051 • Clear 400-052 • Silver</p>
	<p>Nitanium Closed Coil Springs</p> <p>These springs are manufactured from a super-elastic nickel titanium that is designed to open and close spaces with consistent and predictable results. <i>Nitanium</i> coil springs have an exclusive perpendicular loop design which is easy to engage and remove.</p> <p>200 Grams of Force .010 x .030 – 9 mm Closing Springs (6 per pack) .010 x .030 – 12 mm Closing Spring (6 per pack)</p> <p>300 Grams of Force .010 x .030 – 12 mm Closing Springs (4 per pack) .010 x .030 – 14 mm Closing Springs (4 per pack) .010 x .030 – 16 mm Closing Springs (4 per pack) .010 x .030 – 18 mm Closing Springs (4 per pack)</p>	<p>100-622 100-623 100-636 100-637 100-638 100-639</p>

TIP-EDGE RX-1 BRACKETS

TIP-EDGE RX-1 BRACKETS ARE DESIGNED TO OFFER THE FOLLOWING:

- Three dimensional control with tip, torque, and in/out built into each bracket
- Recommended for use with rectangular archwires only
- Vertical slot for auxiliary springs
- Archwire slots have tipping surface to limit mesiodistal crown tipping, and upright surfaces to control final crown tip
- Comes with positioning jigs
- 80-gauge mesh bondable pad for exceptional strength
- Available in .022 slot size

V-Looped Archwires with Cuspid Offset

The V-Looped Archwire is made from high tensile stainless steel plus wire with similar properties to our Australian wire. The V-Looped is an excellent choice for opening bites, space closure, retraction, and elastic engagement.

Kit Includes:

- 1 Rack (# 120-000)
- 1 Rack Cover (# 120-006MC)
- 1 White Flexible Ruler (# 120-022)
- 2 of Each Wire From Size 22 mm to 44 mm (24 Wires)

* Millimeter size is an inside measurement around arch form between loops.

NEOCRYSAL SAPPHIRE CERAMIC BRACKET SYSTEM

THE “CRYSTAL” CLEAR ADVANTAGE

Manufactured from pure monocrystalline material, the *NeoCrystal* Sapphire Ceramic Bracket is the clear aesthetic choice for your practice. *NeoCrystal* Brackets are developed from a single crystal sapphire, one of the hardest and clearest materials found in nature. Once machined out of the crystal, the brackets are then annealed for strength and heat polished to perfect any microscopic flaws. The result is an unmatched aesthetic bracket that allows the natural tooth tone to show through, regardless of shade, for a virtually invisible appearance. Featuring our proprietary *Crunch COAT™* Base and anatomically contoured base radii, the *NeoCrystal* Bracket provides the exceptional performance you demand.

Unmatched Aesthetics

- **Pure monocrystalline material** for a transparent, natural appearance
- **Stain resistant** throughout treatment

Designed for Patient Comfort

- **Heat polished** for a remarkably smooth surface
- **Low profile**
- **Rounded corners**
- **Single hook** offers a less bulky feel than universal hooks

Enhanced Performance

- **Heat treated** for increased strength
- **Reduced friction** offers sliding mechanics comparable to metal brackets
- **Non-allergenic** for sensitive patients
- **Anatomically contoured base** for quick and easy bracket placement
- **Removable color-code ID mark** to ensure accurate placement

NEOCRISTAL SAPPHIRE CERAMIC BRACKET SYSTEM

Maestro Brackets, NeoCrystal® Sapphire Ceramic Bracket System and NeoLucent® Plus™ Bracket System are designed for interchangeability

For aesthetic anterior and metal posterior bracketing

NEOLUCENT PLUS Ceramic Bracket System

The *NeoLucent Plus* Low-Profile Ceramic Bracket System delivers superb aesthetics by blending with the natural tooth tone for a virtually invisible appearance. With improved performance due to a *Crunch COAT™* Base, more anatomically contoured base radii, and improved materials for a smoother finish and color consistency, *NeoLucent Plus* Ceramic Brackets provide the definitive performance you demand.

A U.S. manufacturer, we are dedicated to providing world class products and solutions to meet your every orthodontic need. As a full-service partner, we offer the tools to help expand your practice and diversify treatment options. So when your patients desire a cosmetic alternative, we have the right choice for you, and them.

Patient Satisfaction

Invisible Appearance –

Crafted to the highest aesthetic standards

Translucent, natural appearance from 99.9% pure polycrystalline Alumina

Stain resistant throughout treatment

Comfort –

Designed with your patient's comfort in mind

Low profile

Smooth, polished surface

Rounded corners

Clinical Performance

Accurate placement achieved with an easily removable color-coded ID mark

Strong bonding and predictable debonding with the *Crunch COAT Base*

Easy ligation with ample tie wing clearance

Superior Sliding Mechanics via a precision-cut archwire slot

Breakage Resistant

Non-allergenic for sensitive patients as brackets do not contain nickel, chromium, or other metals

Routine Protocol with no special instruments or adhesives required

NEOLUCENT PLUS CERAMIC BRACKET SYSTEM

What's in the Plus?

Ortho Organizers' Proprietary *Crunch COAT* Base

Bond Strength Comparable to Mesh Pad

Fine alumina particles bonded to the bracket base provide large area for adhesive to bond

Consistent Debonding

Because debonding occurs near the *Crunch COAT* adhesive interface, there is minimal distress to the enamel surface

Compatible with *Maestro Low-Profile Bracket System*

For aesthetic anterior and metal posterior bracketing

NeoLucent Plus Bracket

Maestro Bracket

NeoCrystal Bracket

Aesthetic Archwire Options

To ensure excellence in every one of your cases, we offer an extensive line of aesthetic auxiliaries compatible with the *NeoLucent Plus* Ceramic Bracket System.

Tooth Tone

Plastic-Coated Archwires

Stain and crack resistant, this archwire features a tooth-colored coating that blends with natural dentition and reduces friction.

See pages G-19 - G-20

White Micro-Coated

Bio-Kinetix® Nitanium® Archwires

The labial side of the wire is coated in bright white to enhance aesthetics, without affecting wire dimensions

See pages G-19 - G-20

Pearl Tone Preformed Ligature Wires

Available in a white/pearl hue, this ligature wire features a super smooth, nonstick coating.

See pages G-19 - G-20

Ligatures

Ligatures for individual patient use, avoiding cross-contamination. We offer an array of color options that blend with the bracket and dentition. Available in clear, white, tooth tone, glow natural, and pearl.

See pages 66-67

Chain Elastic

Made from super-elastic long lasting material, these ligatures deliver gentle, continuous force for more predictable tooth movement. Multiple colors to choose from: clear, white, tooth tone, glow natural, and pearl.

See page H-6

ILLUSION PLUS CERAMIC BRACKET SYSTEM

- Fully translucent for the “natural look”
- Purest Polycrystalline, 99% Alumina, material resists breakage
- Compound contour torque-in-base design for precise fit and tip, torque, and in/out movements
- Contoured auxiliary hooks enhance patient comfort
- Mechanical dove-tail grooves/porous surface
- Color-coded site-guides are included for easy and accurate bracket placement

EDGEWISE COMPOSITE BRACKET SYSTEM

A strong, durable, and contemporary design with extra large tie wings for maximum strength. These brackets are made from specially formulated plastic to resist staining. They will bond with stainless steel type adhesives after application of primer or conditioner.

- Full compatibility with metal brackets
- Increased patient comfort with smooth, round edges
- Safe for nickel-sensitive patients
- Available in .018 and .022 slot sizes

Molar Buccal Tubes

MAESTRO 1st Molar Buccal Tubes

Classic orthodontic design with a smooth modern flare.

The *Maestro* Buccal Tube completes the appliance system. It is a non-convertible, single-tube that harmonizes classic orthodontic designs with the needs of today's practitioners and patients. This design provides the precise control needed throughout all phases of treatment for a predictable finish. The *Maestro* Buccal Tube's large funneled entrance, side grip areas, and color-coding help simplify treatment by allowing for easier identification, placement, positioning, and wire insertion. The ease of use associated with this product also reduces chair time which makes the *Maestro* Buccal Tube an extremely cost-effective choice for your practice.

Maestro Buccal Tube product characteristics:

- Lowest possible profile to optimize patient comfort without hindering the precision and control needed for case completion
- Patient comfort is ensured with smooth rounded surfaces and lowered mesiogingival hooks
- Available as a direct bond or weldable
- Metal Injection Molded (MIM) stainless steel material for strength and proven performance

Quality Features Include:

Non-slip side grip areas
for tweezers to hold and position bracket

Defined buccal indent
for accurate stability and placement

Compound contoured
base design for superior fit and bond strength

80 gauge mesh
(micro-etched) bondable pad to maximize bond adhesion

Color-coded I.D. mark
for easy identification

Smooth rounded surfaces
and **lowered mesiogingival hooks** to ensure patient comfort

Large funneled entrance
with notch as guide for wire insertion

Direct Bond Micro Molar Tubes:

- Made of *Nickel-Lite* Material for nickel sensitive patients
- One-piece with a compound, contour base with the patented *Grip-LOK* Micro-Etched Base
- A defined buccal indent for accurate placement and stability
- For use on the 1st and 2nd molar due to reduced pad area
- Shorter flanges allow the buccal tube a more precise interface with the tooth

BUCCAL TUBES

ELITE OPTI-MIM NON-CONVERTIBLE SOLO MOLAR BUCCAL TUBES

Direct Bond Solo Tubes*:

- A one-piece, one-cusp molar buccal tube which is approximately half the length of the traditional molar buccal tube
- Designed to be bonded to the mesial cusp of the 1st and 2nd molar
- Made of *Nickel-Lite* Material for nickel sensitive patients
- One-piece with a compound, contour base with the patented *Grip-LOK* Micro-Etched Base
- For partially erupted molars

BANDS AND LINGUAL ATTACHMENTS

When only the best will do

Bands

We offer a complete selection of bands to fulfill your every request. Each band has the option to be ordered as plain or as a pre-welded assembly. For the ultimate in custom fitting, shape, and retention choose from *Epic* Molar Bands or *Tempra* Molar Bands. They both offer:

- A precise occlusal and gingival fit to avoid cement washout
- Accurate and consistent size graduation for an exact fit
- Trimmed occlusal and gingival area for minimal interference
- Thinner straight interproximal for reduced separation
- An anatomically shape for a secure fit and superior retention
- Permanent I.D. marks on the mesial side for easy identification
- Micro-etched interior for maximum retention
- High quality stainless steel which withstands additional pressure of extraoral and intraoral appliances

Epic Bands

When the right fit is important, do not settle for anything less than the *Epic* Molar Band. Its superior tooth design adapts easily to the anatomical contour of the tooth. Made of regular tempered material, the *Epic* Molar Band is extremely malleable allowing it to easily recontour. It is available in whole sizes: 3 through 36.

Tempra Bands

Made of full tempered material, the *Tempra* Molar Band offers great elasticity and a superior fit. In addition, the band has increased occlusal edge strength which prevents deformation. The *Tempra* Molar Band is available in half sizes; 29½ through 44.

Bicuspid Bands

Made of full tempered material, the bicuspid bands are anatomically fit for left or right, and available in whole sizes: 1 through 24 for the maxilla, and 3 through 26 for the mandible.

Primary Molar Bands

The narrow occlusal-gingival height allows the general purpose primary molar band to easily fit primary molars. Molar bands are available in the Starter Kit, pre-welded or plain as an individual band. They are anatomically fit for left or right, and available in half sizes; 25 through 30½.

EPIC MOLAR BANDS

EPIC CONTOUR MOLAR BANDS

- Superior Tooth Design Adapts to Anatomical Contours
- 33 Proportional Graduated Full Sizes in Both Uppers and Lower – Numbered 3-36
- Regular Temper
- Malleability with Excellent Adaptation
- Easy to Recontour
- Accurate Right and Left Occlusal/Gingival Tooth Anatomy
- Available with Micro-Etched Interiors for Maximum Retention

U6L36 Epic Molar Band

EPIC CONTOUR BAND KITS WHOLE SIZES 3 THROUGH 36

All Band Kits can be ordered as Plain Bands or Prewelded Assemblies. Also, Band Kits may be ordered either for the upper or lower molars, or the 1st or 2nd molars. Band Coding: Legibly marked on mesial side: "U" indicates Upper; "L" indicates Lower; "S" indicates 2nd Molar; "R" indicates Right; "L" indicates Left. (For instant identification, an asterisk "*" is marked after the size of each Epic Band.)

BICUSPID BANDS

- Permanent Size Marking
- Anatomically Contoured
- Full Tempered
- Enhanced Retention

To Order Kits

Specify Kit Type:

- Introductory (100 bands),
- Professional (150 bands),
- or Master (300 bands)

Specify size range:
Full-range or Mid-range

All Band Kits can be ordered as Plain Bands or Prewelded Assemblies.

To Order Individual Bands:

Specify tooth type, left or right, size number, and quantity.

MAXILLARY BICUSPID KITS

DIRECT BOND LINGUAL ATTACHMENTS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Direct Bond Eyelets with Chain (Eruption Appliances) Our direct bond eyelets have 1" chains that may be used full length, or trimmed as needed. They are biocompatible and large enough to thread power elastics through to provide traction in the desired direction to expose impacted teeth.</p> <p>Opti-MIM Nickel-Lite Eyelet with Sterling Silver Chain (1/pk)</p> <ul style="list-style-type: none"> • 3.75 mm x 3 mm curved base • Micro-etched mesh base • One-piece construction 	<p>430-005C</p>
	<p>Gold Eruption Appliance – Round (5/pk) 24k gold plated for maximum biocompatibility</p> <ul style="list-style-type: none"> • 3.5 mm diameter flat base • 80 gauge foil mesh base • Eyelet welded to base 	<p>430-008</p>
	<p>Gold Eruption Appliance – Rectangular (5/pk) 24k gold plated for maximum biocompatibility</p> <ul style="list-style-type: none"> • 3.75 mm x 3 mm curved base • Micro-etched mesh base • One-piece construction 	<p>430-009</p>
	<p>Opti-MIM Direct Bond Eyelet (10/pk) This <i>Nickel-Lite</i> Eyelet can be easily bonded to any tooth. It offers better bond strength and a <i>Grip-LOK</i> Base.</p>	<p>430-005</p>
	<p>Opti-MIM Direct Bond Button (20/pk) Made of <i>Nickel-Lite</i> Material they are single unit Metal Injection Molded and tailored to conform to tooth surface. Features <i>Grip-LOK</i> Base.</p>	<p>430-002</p>
	<p>Opti-MIM Micro Direct Bond Lingual Button (10/pk) Made of <i>Nickel-Lite</i> Materials. Small size allows bonding in hard to access areas. Small radiused head ensures patient comfort and provides room to tie elastics or wires. Features <i>Grip-LOK</i> Base for greater bond strength.</p>	<p>430-001</p>
	<p>Opti-MIM Direct Bond Lingual Cleat (20/pk) Low-profile design with smooth ball hooks easily adjusted for elastic placement or other treatment purposes.</p>	<p>430-004</p>

DIRECT BOND LINGUAL ATTACHMENTS

ITEM	DESCRIPTION	CATALOG NO.																
	<p>Opti-MIM Bite Guides (10/pk) One-piece unit which bonds directly to lingual side of the upper centrals to efficiently open a deep bite and/or advance the mandible. Simply reverse unit with respect to the ID mark for appropriate use.</p> <ul style="list-style-type: none"> • Stainless steel • Composite 	<p>430-006 430-007</p>																
	<p>Composite Direct Bond Button (10/pk) Aesthetically pleasing button is smooth and radiused for enhanced patient comfort. Durable and stain resistant, the base is curved for an anatomical fit with dovetailed grooves on base for secure mechanical bond. Bond with any bonding adhesive with no extra primer necessary.</p>	<p>430-000</p>																
	<p>Direct Bond Lingual Sheath (10/pk) Foil mesh pad, bonds directly to molars. .036 slotted, horizontal, latching indent. Fits left or right.</p>	<p>971-032DB</p>																
	<p>Bondable Retainers Lower Cuspid-to-Cuspid (3x3) Made from heat treatable .032 wire and 80-gauge foil mesh pads for superior bond strength. May be fitted to study model or in some cases directly to patient.</p> <p>Kit (4 each of size in a convenient dispenser case: 20 total) Individual components (5/pk)</p> <table border="1" data-bbox="479 1459 1144 1617"> <thead> <tr> <th>SIZE</th> <th>CATALOG NO.</th> <th>SIZE</th> <th>CATALOG NO.</th> </tr> </thead> <tbody> <tr> <td>Kit</td> <td>433-000</td> <td>26 mm</td> <td>433-026</td> </tr> <tr> <td>22 mm</td> <td>433-022</td> <td>28 mm</td> <td>433-028</td> </tr> <tr> <td>24 mm</td> <td>433-024</td> <td>30 mm</td> <td>433-030</td> </tr> </tbody> </table>	SIZE	CATALOG NO. ITEM	DESCRIPTION	CATALOG NO.
	<p>Everest™ Light-Cure Orthodontic Adhesive</p> <p>The smooth, tacky composite resin delivers ideal handling characteristics which eliminates bracket float and allows for easy flash clean up. Adhesive provides the optimum properties for bonding metal, ceramic, or plastic brackets using light-cure technology. Light-activation provides accurate bracket placement ensured by allowing for sufficient working time. Produces a strong light-cured chemical bond which also debonds predictably. Archwires can be placed immediately after fully curing the brackets. Contains fluoride to help protect against potential decalcification.</p>	
	<p>Everest Light-Cure Kit in Syringes</p> <p>Kit Includes:</p> <ul style="list-style-type: none"> • 4 Push Syringes (3.5 grams ea.) • 1 Gel Etch Syringe (4 grams) • 1 Sealant Resin (7 ml) • 5 Syringe Tips (22-Gauge) • 2 Mixing Wells (10-Cavity) • 1 Mixing Pad • 50 Brushes • 1 Instruction For Use Sheet 	490-300

ITEM	DESCRIPTION	CATALOG NO.
	<p>Everest Low Viscosity, Light-Cure Flowable Adhesive</p> <p>Everest Low Viscosity Light-Cure Flowable Adhesive features a precision-controlled syringe which prevents overflow and run-on. It ensures accuracy as it flows easily into difficult areas, but is reliable not to slump or run until light curing occurs. The disposable tip provides precise application, accessibility, and control, resulting in excellent aesthetics. It is dependable, strong, and more resistant to shock and stress. This adhesive is ideal for bracket bases with greater than an 80-gauge mesh and can be used in many ways, such as bonding lingual retainers, Invisalign® attachments, occlusal build-ups for opening a posterior bite, indirect bonding, and much more! Contains fluoride to help protect against potential decalcification.</p>	
	<p>Everest Low Viscosity Adhesive Kit</p> <p>Kit Includes:</p> <ul style="list-style-type: none"> • 3 Flowable Adhesive Syringes (2 grams ea.) • 1 Green Etchant Syringe (1.6 grams) • 1 Light-Cure Enamel Bonding Sealant Resin (3 ml) • 25 Flowthru 22 Gauge Syringe Tips • 10 Bonding Brushes • 1 Instruction For Use Sheet 	<p>490-330</p>

Placement in a moist field simplifies application and bonding procedures. Fluoride release helps prevent against decalcification and decay. Can be used with an etch or non-etch technique. As a self-curing adhesive, it is particularly useful in bonding situations in which light curing is neither possible nor desired.</p> <p>Fuji ORTHO Standard SC Kit (starts approx. 34 cases) Kit Includes:</p> <ul style="list-style-type: none"> • 1 Bottle of Powder (40 grams) • 2 Bottles of Liquid (8 grams, 6.8 ml each) • 1 Scoop • 1 Mixing Pad <p>Fuji ORTHO SC Reorder Components Powder (40 grams) Liquid (8 grams) Conditioner (25 grams)</p>	<p>480-133</p> <p>480-131</p> <p>480-121</p> <p>480-126 480-127 480-108</p>

BAND CEMENTS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Everest Light-Cure Band Cement Provides a longer working time and a rapid setting time with its light-activated band cement in a single paste system. Can be placed directly into bands. Excess flash is easy to clean up prior to the light curing and the cement is easy to see due to the blue color. Contains fluoride to help protect against potential decalcification.</p> <p>Everest Light-Cure Orthodontic Band Cement Kit Kit Includes: • 6 Push Syringes (5 grams ea.)</p> <hr/> <p>Everest Light-Cure Orthodontic Band Cement Reorder Components 1 Light-Cure Band Cement Refill Syringe (5 grams)</p>	<p>490-390</p> <p>490-230</p>
	<p>Everest Powder/Liquid Band Cement Everest chemically bonds to enamel without the use of etchants. Using a two-part glass ionomer band cement system of powder and liquid, it has a low film thickness and will not wash out under bands. The final setting time is 6 to 7 minutes. Contains fluoride to help protect against potential decalcification.</p> <p>Everest Glass Ionomer Cement Economy Kit Kit Includes: • 1 Powder (100 grams) • 2 Liquid (50 grams ea.) • 1 Mixing Pad • 1 Measuring Scoop • 1 Instruction For Use Sheet</p> <hr/> <p>Everest Glass Ionomer Cement Starter Kit Kit Includes: • 1 Powder (50 grams) • 1 Liquid (50 grams) • 1 Mixing Pad • 1 Measuring Scoop • 1 Instruction For Use Sheet</p> <hr/> <p>Everest Glass Ionomer Cement Reorder Components 1 Glass Ionomer Powder (50 grams) 1 Glass Ionomer Liquid (50 ml)</p> <hr/> <p>Everest Miscellaneous Reorder Components 50 Disposable Spatulas 5 Brush Holders 5 Mixing Pads 5 Measuring Scoops 100 Disposable Brushes 50 Disposable Long-Handled Brushes 10 Mixing Wells (2-Cavity) 1 Dispensing Gun 25 Etchant Gel Needle Tips & LV Flowable Tips</p>	<p>490-380</p> <p>490-385</p> <p>490-270 490-271</p> <p>490-500 490-504 490-505 490-506 490-510 490-520 490-535 490-220 490-235</p>

ITEM	DESCRIPTION	CATALOG NO.
	<p>Fuji ORTHO Automix Light-Cure Band Cement with Fluoride Makes bonding faster and easier, the Automix systems dispenses the exact ratio so there is a perfect mix every time. Application is stress free with no need to measure, mix, or etch and paste placement is in a wet field.</p> <p>Longer working time</p> <ul style="list-style-type: none"> • Five full minutes of working time <p>Always the perfect mix</p> <ul style="list-style-type: none"> • Automix system makes preparation stress free, no measuring or hand mixing needed <p>No white spots</p> <ul style="list-style-type: none"> • Resin-reinforced orthodontic glass-ionomer adhesive - provides a long-term fluoride release which aides in the prevention of white spot lesions <p>Moisture tolerant</p> <ul style="list-style-type: none"> • Wet field compatibility <p>Blue color for bands</p> <ul style="list-style-type: none"> • Makes cement easier to distinguish from the tooth surface for easy removal <p>Fuji ORTHO Automix Light-Cure Band Cement Starter Kit (enough to cement 56 bands) Kit Includes:</p> <ul style="list-style-type: none"> • 2 Paste Pak Cartridges (13.3 grams each) • 1 Paste Pak Dispenser • 20 Automix Mixing Tips <p>Fuji Ortho Automix Light-Cure Band Cement Reorder Components</p> <ul style="list-style-type: none"> • 2 Paste Pak Cartridges (13.3 grams each) • 1 Mixing Pad 	<p>480-110</p> <p>480-111</p>
	<p>Fuji ORTHO Band Cement Self-Cure (SC) Makes bonding faster and easier – the dispenser produces two pastes to the exact ratio so a strong bond can be achieved every time. The doctor or assistant mixes the paste for 15 seconds to a smooth, creamy consistency. The paste stays in place without running and is good for up to 3½ minutes. No etching is required and paste is placed in a wet field. Each kit contains enough paste to cement approximately 62 bands.</p> <p>Fuji ORTHO Band Cement Self-Cure Kit (enough to cement 62 bands) Kit Includes:</p> <ul style="list-style-type: none"> • 2 Paste Pak Cartridges (13.3 grams each) • 1 Paste Pak Dispenser • 1 Mixing Pad • 1 Mixing Spatula <p>Fuji ORTHO Band Cement Self-Cure Reorder Components</p> <p>2 Paste Pak Cartridges (13.3 grams each) 1 Paste Pak Dispenser</p>	<p>480-140</p> <p>480-141 480-142</p>

CURING LIGHT/AUXILIARIES

ITEM	DESCRIPTION	CATALOG NO.
	<p>Fusion™ 4 Ortho LED Curing Light*</p> <p><i>Fusion 4 Ortho LED Curing Light</i> is a high power, lower dispersion curing light that enables rapid bracket cures in only 3-5 seconds. This modular light is conveniently sized to fit in the palm of your hand and features a rechargeable smart lithium-ion battery for cordless use. This 2700-mW/cm² laser-sharp focused beam is activated through a sleek metal keypad that includes raised buttons including a large ON/OFF button for easy activation.</p> <p><i>Fusion Curing Light Kit (Silver)</i></p> <p><i>Fusion Curing Light Kit (Pink)</i></p> <p><i>Fusion Curing Caps-13 mm (50/Pack)</i></p> <p><i>Fusion Barrier Sleeves (100/pack)</i></p> <p><i>Fusion Eye Shield</i></p> <div style="display: flex; justify-content: space-around; align-items: center;">      </div> <p><small>* Features a universal adapter for international use</small></p>	<p>506-0360</p> <p>506-0361</p> <p>506-0375</p> <p>506-0370</p> <p>506-0372</p>
	<p>Mini Sponge Applicators (200 Sponges in Plastic Jar)</p> <p>Specially designed for application of liquids, etches, and resins to teeth. Using tweezers, each sponge can be picked out from premoistened jar and dipped in liquid before applying to desired area. Mini sponges may be used during bonding to apply etchant or any liquid, such as primers, conditioners, etc.</p>	<p>480-015</p>
	<p>Gel Etch Econo-Syringe*</p> <p>Gel etch is made up of a green, 37% phosphoric acid formula and is dispensed from a large 12 gram syringe.</p> <p> <small>* Ground shipment recommended – This product is classified as hazardous material as per the U.S. Department of Transportation Pipeline and Hazardous Materials Safety Administration. Extra shipping charges may apply.</small></p>	<p>470-162</p>

ITEM	DESCRIPTION	CATALOG NO.
	<p>Cheek Retractors</p> <p>For treatment with teeth in open or closed bite. Self-retaining. Can be cold sterilized. Excellent for photography.</p> <ul style="list-style-type: none"> • Adult Cheek Retractors (2 per pack) • Teen Cheek Retractors (2 per pack) • Pedo Cheek Retractors (2 per pack) • Assortment Pack (one of each size) 	<p>300-020 300-022 300-021 300-023</p>
	<p>Adjustable Cheek Retractors</p> <p>Unique bow design allows adjustment to ensure comfortable fit. Can withstand temperatures up to 400°F. Fully sterilizable. (1 per pack)</p>	<p>300-015</p>
	<p>Lip Retractors</p> <p>Transparent plastic lip retractors have long handles so they can be held easily. Excellent for photography. Rounded edges. Can be cold sterilized. (2 per pack)</p> <ul style="list-style-type: none"> • Standard Lip Retractors • Mini Lip Retractors 	<p>300-025 300-026</p>
	<p>Double End Lip Retractors</p> <p>Features both a pedo and teen/adult size. Comfortable and easy to hold, yet allows an excellent field of vision for treatment and photographs. Can withstand temperatures of 370°F/188°C. Amber tint identifies it as an autoclavable plastic instrument. (2 per pack)</p>	<p>300-027</p>
	<p>Retract EEZ® Photo Lip Retractor</p> <p>Excellent for occlusal photographs with easy to grip handles, a great anatomical fit, plus angled handles. Can be cold sterilized, as well as autoclaved, though heat sterilization may cause hazing of the material.</p>	<p>300-029</p>
	<p>Combo Cheek Expander</p> <p>Perform two tasks at once; expand the cheeks while simultaneously depressing the tongue for unrestricted access to the whole mouth. Can withstand temperatures of 370°F/188°C. Amber tint identifies it as an autoclavable plastic instrument.</p> <ul style="list-style-type: none"> • Small • Medium • Large 	<p>300-016 300-017 300-018</p>
	<p>Tongue Shield – Latex Free</p> <p>Combination of two bite blocks and a vertical shield. The shield prevents the tongue from touching the lingual surface of the anterior teeth. Center hole allows for insertion of saliva ejector. Excellent during bonding procedures. Can be cold sterilized. (Pink, 3 per pack)</p> <ul style="list-style-type: none"> • Adult/Teen • Child/Pedo 	<p>300-030 300-031</p>

AUXILIARIES/CONDITIONERS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Disposable Tongue Block</p> <p>Available in two sizes to accommodate pedo or teen/adults. These strawberry scented tongue blocks keep the mouth open, with the jaw muscles in a relaxed state while keeping the tongue away from the bonding area. Designed with comfort and convenience in mind, these blocks are soft enough to trim with scissors if needed and feature openings to accommodate the Saliva Ejector (optional) and its companion Adapter Tube (optional). (20 per pack)</p> <ul style="list-style-type: none"> • Small • Medium 	<p>300-032 300-033</p>
	<p>Disposable Saliva Ejector and Adapter Tube Attachments for Disposable Tongue Block</p> <p>The Saliva Ejector is a perforated tube that's used to suction saliva from the patient's mouth. Constructed of medical grade vinyl tubing, it features a soft metal insert that enables the practitioner to shape it to best fit the individual patient. The companion Adapter Tube links the Saliva Ejector to the practitioner's vacuum system by a quick connect tip which speeds device changes. (3 per pack)</p> <ul style="list-style-type: none"> • Saliva Ejector • Adapter Tube 	<p>300-034A 300-034B</p>
	<p>Fuji ORTHO Gel Conditioner</p> <p>This gel conditioner is 20% polyacrylic acid, and is designed to mildly condition enamel. For easy application, the conditioner is available in syringes, with 25 disposable brush tips (3 syringes, 1.4 grams each, 25 tips).</p>	<p>480-116</p>
	<p>Power Bond™ O.L.C. Light-Cured Bonding Conditioner</p> <p>Increases bond strength dramatically. Ideal for bonding to acrylic, composite or metal surfaces or any enamel surface where maximum adhesion is desired. Pre-mixed, one-step conditioner should be brushed on dry etched enamel prior to applying adhesive. This conditioner ensures a strong bond.</p> <p><i>Power Bond O.L.C. (7 grams)</i></p>	<p>471-062</p>
	<p>Advantage Porcelain Bonding Conditioner</p> <p>Prepares dental porcelain for metal or ceramic bond brackets. Primer is a saline coupling agent which helps to chemically bond the adhesive to the porcelain. Porcelain Conditioner (16 cc)</p>	<p>480-013</p>
	<p>Plastic Bracket Conditioner</p> <p>Prepares plastic brackets for direct bonding. Brush on base prior to applying adhesive. Provides a strong bond between the bracket base and adhesive. Must be refrigerated when not in use. (10 cc)</p>	<p>470-170</p>

Oval

The *Dimple*® Centermark is available on our nickel titanium and *Cu Nitantium* Archwires. This vertical protrusion, which is placed at the centerline of the wire, helps prevent the archwire from sliding through the bracket or out of the buccal tube. Also eliminates the need for cinching behind the buccal tubes. The *Dimple* is still the most efficient, most economical way to prevent archwire slipping.

CU NITANIUM ARCHWIRES

CU NITANIUM 27° ARCHWIRES 

CU NITANIUM 35° ARCHWIRES 

Copper. A Natural Transition.

Cu Nitanium Archwires are truly comparable to *Ormco*®'s *Copper Ni-Ti*™ Archwires* and refined using the most advanced technology for greater treatment predictability and control. The unique thermal properties of copper enhance the *Nitanium* Archwires for a precise control of forces, while maintaining excellent flexibility. Made of the highest quality materials, *Cu Nitanium* Archwires provide fast, natural, and reliable results for optimal patient outcomes.

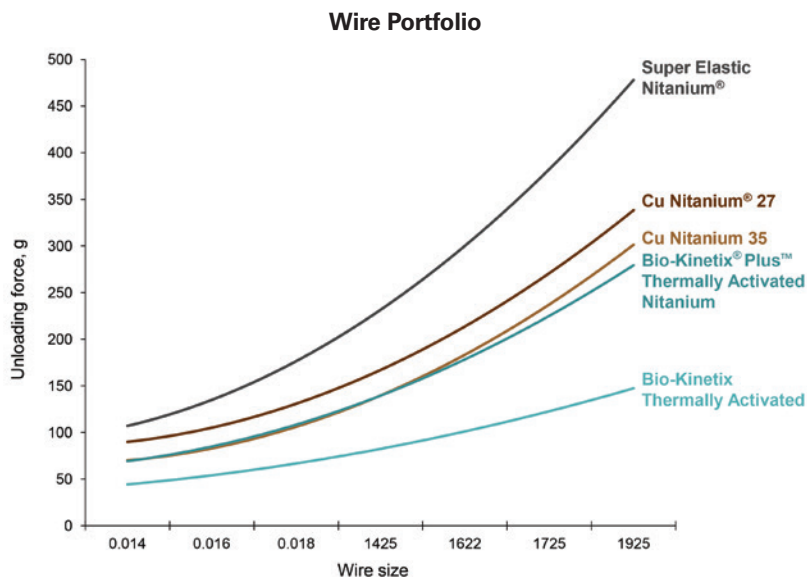

The addition of copper:

- Enhances the thermal properties of *Nitanium* providing superior flexibility for easier placement, in even the most severe cases, while maintaining precise control of forces
- Offers higher resistance to deformation, resulting in fewer wire changes
- Provides smooth and continuous loading and unloading forces for extended working time
- Facilitates a controlled force-deflection curve for an optimal biological response and faster treatment
- Delivers consistent forces through reliable transformation temperatures for a predictable and gentle treatment

Available in two archwire series options to fit your treatment needs:

- ***Cu Nitanium 27°C Archwires*** – This wire series provides optimal nickel titanium force levels with the additional flexibility required for easy placement in crowded cases and comfortable tooth movement.
- ***Cu Nitanium 35°C Archwires*** – This wire series is activated at body temperature to facilitate easy engagement, consistent forces, and efficient tooth movement using transitional temperature changes back and forth between the “soft” martensite state and “firm” austenite state.

The *Variable Force 3* Archwire is a heat activated, multi-force, nickel titanium archwire with three distinct force regions. The *Variable Force 3* Archwire places the correct force to the appropriate region (anterior, bicuspid, and posterior) of the arch to quickly torque, level, and align, without sacrificing patient comfort. It could take multiple archwire changes with any other archwire to achieve the same level and alignment results.

In addition, the archwire is easy to place because the thermal mechanics allow the wire to stay soft when not in the mouth, and once placed the warmth of the mouth allows the archwire to take on its memory shape. This thermal, *Nitanium* Archwire has a multi-step manufacturing process which consistently creates three different zones of forces along the archwire. The *Variable Force 3* Archwire provides forces that range from 50 grams in the anterior, and up to 300 grams in the posterior region, depending on the archwire size.

One archwire provides the benefits of three archwires:

- Distinct forces to the anterior, bicuspid, and posterior regions
- Ideal biological forces for efficient tooth movement
- Reduced number, and frequency, of archwire changes
- Allows for longer treatment intervals
- Greater patient comfort
- Superior shape integrity
- Available in round or rectangular dimensions

Anterior region of arch form has the lowest heat-activated force, as anterior teeth have the lightest roots.

The force increases through the **bicuspid region**, maintaining a slightly greater heat-activated force to move larger rooted bicuspids.

Posterior region

A heat-activated *Nitanium* Archwire, specifically designed for consistent performance and low tooth moving forces, the *Bio-Kinetix* Thermally Activated *Nitanium* Archwire provides outstanding resiliency and demonstrates ultimate thermal performance. The archwire is soft at room temperature allowing for easy ligation.

Benefits of using the *Bio-Kinetix* Thermally Activated *Nitanium* Archwire:

- Excellent shape integrity and shape memory for a heat-activated archwire
- Temperature Transition Range (TTR) = 80°-90°F (26.7°-32.2°C)
- Optimum and consistent performance
- Easy ligation at room temperature
- Outstanding resiliency
- Offers slightly lower forces than the *Bio-Kinetix Plus* Thermally Activated *Nitanium* Archwire
- Ideal for use during cases that have significant crowding
- Very responsive to chilling which allows patient to ease discomfort with cold temperature items
- Low force provides greater patient comfort, and helps control torque early in treatment

The *Bio-Kinetix Plus* Archwire is ideal for early- to mid-stage treatment with moderate to severe crowding. This wire is best suited for the initial stage of treatment because it is easy to engage. Once the wire is placed, it then reacts to the heat in a patient’s mouth and exerts a light, continuous force as it returns to its original shape.

Made from an advanced nickel titanium alloy, the *Bio-Kinetix Plus* Archwire exhibits improved resiliency resulting in an archwire that is measurably more resistant to permanent set (deformation). In addition, the advanced thermal properties found in the archwire display a narrower transformation band from martensite to austenite which gives the archwire a “crisp” response as it moves between the “soft” and “stiff” state.

Etched Midlines:

- Upper - 3 black marks
- Lower - 1 black mark

Features of the *Bio-Kinetix Plus* Archwire:

- Forces fall directly between *Bio-Kinetix* Thermally Activated *Nitium* Archwires and Super Elastic *Nitium* Archwires
- Temperature Transition Range (TTR) = 65°- 75°F (18.3° - 23.9°C)
- Utilizes shape memory and super elastic properties to move teeth
- Excellent shape characteristics and resiliency
- Wire is slightly thermal at room temperature for easy ligation
- Responsive to chilling for easier ligation
- Has a smooth finish for minimal friction

Carriere Archwires Complement the Carriere SLX Bracket System

Our new passive self-ligating system incorporates more than ten clinician inspired enhancements – all designed to enable you to finish treatment more quickly and with the degree of quality that you expect. Try the SLX System today, and see why it's a game changer for you, your patients, and your practice.

Carriere Cu Nitium Archwires with the Innovative EZ Stops System*

This new crimpable archwire stop delivery system provides smooth positioning. The unique holder allows clinicians to quickly position the tube stop in a precise location for crimping on the archwire. Threading a crimpable tube stop onto an archwire is quick and easy. No more lost stops!

- No more frustration with sticky sliding
- Easy-to-see
- Easy-to-grip
- Pre-threaded on each archwire
- Sterilizable by steam autoclave

ANDREWS² APPLIANCE

Optimal arches are essential for optimal occlusion. Andrews² Archwires have the features needed to treat arches to optimal standards efficiently.

- .014, .016 Nitanium[®] Super Elastic Wires have flexibility for initial aligning and rotations
- .014, .016 stainless steel wires have a balance of flexibility and rigidity for initial aligning and leveling
- .016, .018 stainless steel wires have a balance of flexibility and rigidity for leveling, correcting arch shape, and for mesiodistal translation
- .018 x .025 Orthology-Blue (heat treatable) stainless steel wires are for inclining and fine tuning

Flexibility:

Arches can be effectively and efficiently treated to optimal standards by using the most appropriate Andrews² Appliance prescription in combination with the most suitable Andrews² Archwires in terms of flexibility.

Shape:

The Andrews² Archwires are preformed to match the average shape of the 120 non-orthodontic normal study casts used in the "Six Keys to Normal (Optimal) Occlusion" study. Like any preformed archwire, its shape must be customized to each patient's unique anatomy.

Length:

The overall length can usually be customized with one cut.

Pre-Posted Archwire Option:

For each arch, the small, medium, and large distances between the posts means one of the 3 will fit 90% of the normal patient population.

Looking for a great archwire for early- to mid-stage treatment? The Super Elastic *Nitium* Archwire is a perfect choice. This archwire remains constantly active, reducing the number of archwire changes. In addition, it provides slightly less force than our *Black-Ti* Super Elastic *Nitium* Archwire, and is fully austenitic at room temperature so that the material is constantly springy, and will immediately return to its original shape after flexing through the bracket slots.

Due to its high flexibility and resiliency, the archwire completely recovers from bends and deformation of angles up to 45°, and even up to 75° in some cases!

The Super Elastic *Nitium* Archwire offers:

- Moderate, consistent force for efficient tooth movement
- Greater patient comfort during treatment than found with stainless steel archwires
- Excellent resiliency with high flexibility
- Responsive to chilling, 45-60° F (7.2-15.6°C)
- Near consistent force between archwire changes
- Rectangular archwire offers ability to simultaneously level and add torque and rotation earlier in treatment
- Available with either a dimple mid-line or center-mark

TORQUED WITH 20° ANTERIOR TORQUE SUPER ELASTIC NITANIUM ARCHWIRES

 NITANIUM SUPER ELASTIC ARCHWIRES

Excellent choice for adding extra torque in the anterior segment. We take our *Nitanium* Archwire with the *Pro Form* shape and add 20° additional torque in the anterior while maintaining non-torque in the posterior regions, and introduce torque in the upper centrals and laterals. The lower, torqued archwires allow the lower anteriors to be negatively torqued to help compensate for the rebound factor after removal of the archwire.

- Provides 20° anterior torque
- Three anterior torque segment widths available
- Early introduction of torque in upper centrals and laterals
- Provides uprighting torque in the lower anterior segment
- Labial or lingual torque forces available by reversing wire orientation
- Ideal for passive, self-ligating bracket systems
- *Nitanium* material provides lower forces compared to stainless steel alternatives, as well as shape memory benefits for better resiliency, and longer activation range

3 sizes: .016" x .025", .017" x .025" and .019" x .025" archwire size (5 per pack)

The *Nitanium* Torqued Archwire should be placed in the upper arch with the I.D. mark facing gingival, and placed in the lower arch with the I.D. mark facing occlusally.

Achieve faster results with the *Black-Ti* Super Elastic *Nitanium* Archwire. This archwire produces 30% less friction between the bracket and wire than a traditional nickel titanium archwire. The ultra smooth, hard black oxide surface allows your patients to get to the finishing stage sooner by providing better sliding mechanics in early- and mid-stage treatment.

Why use the *Black-Ti* Super Elastic *Nitanium* Archwire?

- Reduces sliding friction by 30%
- Excellent shape characteristics and resiliency
- The ultra smooth, hard, black oxide surface is a natural characteristic of the archwire and not a coating
- Will not chip, wear, or peel
- Looks similar to regular nickel titanium archwires when in the mouth
- Economically priced compared to other friction-reducing archwires
- Our highest force, super elastic nickel titanium archwire
- The dimple, mid-line indication ensures accurate wire placement, and keeps wires from slipping

These nickel-free beta titanium alloy archwires were developed with the assistance of Dr. Ravindra Nanda. An excellent alternative over TMA archwires, the CNA Beta III Nickel-Free Archwire displays superb formability for placement of loops and bends reducing important chairside time. In addition, the flexibility makes it the perfect archwire for use during the mid-to-late stages of treatment.

Due to its ease of bending, the CNA Beta III Nickel-Free Archwire, is ideal for use when the following is required:

- Custom tipping
- Aligning
- Space closure
- Rotation
- Tooth movement

In addition, doctors are moving to the CNA Beta III Nickel-Free Archwire over the TMA because:

- CNA Archwire does not break as easily as TMA
- The CNA Archwire has a smooth, high-polish finish which provides less friction
- It is easier to form loops and bends with the CNA Archwire
- Once intended shape is formed, the archwire maintains its integrity

Choose the CNA Beta III Nickel-Free Archwire and you'll be able to move patients into a rectangular archwire more quickly to correct torque. Not to mention, you'll be able to work on root correction, and even over correction is possible by inserting bends.

We offer the CNA Archwire in preformed, arched, or straight. The preformed option is also available under the Connecticut Intrusion Arch Form (see following page).

ARCHWIRES

.017 x .025 Lower	100-986	100-987	100-977

Developed in consultation with Dr. Ravindra Nanda, this archwire is a great tool for providing absolute intrusion of anterior teeth, molar tip-back, incisor flaring, leveling of anterior occlusal cants, and more! Our CIA Archwire is available in either *Nitanium* or nickel-free *CNA*, in both maxillary and mandibular forms. The force may be adjusted by increasing or decreasing the bend at the posterior leg of the arch.

The CIA Archwire offers the following benefits:

- Use the long (upper/lower) archwires for non-extraction and/or long arches
- Use the short (upper/lower) archwire for extraction and/or shorter arches

Nitanium version of the CIA Archwire

- Provides moderate, continuous forces over a large activation range
- Super elastic qualities
- For use with adult or mixed dentition

CNA Beta Nickel-free version of the CIA Archwire

- Nickel-free archwire
- Recommended for use in adult patients
- Ideal for following NiTi treatment
- Best for extraction patients treated with sliding mechanics; the archwire may be used for intraoral anchorage
- Accepts permanent bends which allows force adjustment and cinch back

REVERSE CURVE OF SPEE (R.C.S.) ARCHWIRES

We offer three Reverse Curve of Spee (R.C.S.) archwire shapes to meet your curve of spee correction needs. All three shapes are carefully finished to ensure the archwire slides easily through the bracket slot while applying continuous force for ideal movement. R.C.S. Archwires may be used for bite correction, or with springs and elastomerics for retraction.

R.C.S. Archwires are best suited for:

- Preventing molar tipping and rotations
- Maintaining anterior torque
- Initial leveling and aligning
- Arch consolidation and expansion
- Deep and open bite correction
- Retraction of flared, protruding incisors

The R.C.S. Archwires are available in both *Nitanium* and heat-activated *Bio-Kinetix Nitanium*:

Nitanium Super Elastic R.C.S. Archwires

Nitanium R.C.S. Archwires provide light-to-moderate, constant forces. These archwires are flexible, and exhibit excellent resiliency. We offer the *Nitanium* R.C.S. Archwires in the following forms:

- **Standard *Nitanium* R.C.S. Archwires:** Most popular “rocking chair” curve with a moderate radius, which provides the maximum retraction efficiency with fewer archwire changes.

- **Straight Leg R.C.S. Archwires:** The anterior portion of the wire has a rocking horse curve and the legs of the wire are flat and level. Straight legs do not toe-in the molar, they help to tilt back molars for anchorage purposes. The wire easily puts curve of spee on the upper arch, and can be used to torque the molars buccally. Intrusion or extrusion of anterior teeth can also be accomplished. When flipped, it can be used to expand the lower arch. This is truly a multi-functional arch!

- **Dimple *Nitanium* R.C.S. Archwires:** Has a shallower radius than our standard R.C.S. Archwire, providing gentle movement and exerting lighter forces when correcting the curve. This wire is also easier to place and has a dimple mid-line to help prevent the wire from sliding.

Heat-activated *Bio-Kinetix Nitanium* R.C.S.

Thermal *Bio-Kinetix Nitanium* R.C.S. Archwires are heat-activated archwires with shape-memory. These archwires are soft at room temperature for easy ligation and then become fully active in the mouth. The gentle forces remain consistent throughout placement so that placement of the archwire is noticeably more comfortable for the patient. In addition, the superb flexibility reduces the chances for the debonding of the brackets.

Thermal *Bio-Kinetix Nitanium* Archwires are available in the standard *Nitanium* R.C.S. shape that has a moderate radius, and a deeper rocking-chair radius.

Aesthetic archwires are ideal for use with aesthetic brackets to help provide an invisible appearance of orthodontic appliances. We offer three styles of aesthetic archwires to meet your professional needs: Super Elastic *Nitanium* Tooth Tone Archwires, Stainless Steel Tooth Tone Plastic Coated Archwires, and Micro-Coated *Bio-Kinetix* Thermal Archwires.

Super Elastic *Nitanium* Tooth Tone Archwires

Super Elastic *Nitantium* Tooth Tone Plastic Coated Archwires have a plastic, friction-reducing, tooth-colored coating which blends with natural dentition as well as ceramic, plastic, and composite brackets. Stain and crack resistant, the arch maintains its original color over time, and will not crack when deflected or bent.

This archwire displays the same features as non-aesthetic Super Elastic Archwires:

- Moderate, consistent force for efficient tooth movement
- Greater patient comfort during treatment than found with stainless steel archwires
- Excellent resiliency with high flexibility
- Responsive to chilling, 45-60° F (7.2-15.6°C)
- Near consistent force between archwire changes
- Rectangular archwire offers ability to simultaneously level and add torque and rotation earlier in treatment
- Available with a dimple center-mark

Micro-Coated *Bio-Kinetix* Thermal Archwires

Now made with a whiter coating...the micro-coated thermal *Nitantium* Archwire's entire width is in metal and only the labial side of the wire is coated in bright white to enhance aesthetics.

Additional benefits of using the Micro-Coated *Bio-Kinetix* Thermally Activated *Nitantium* Archwire:

- Excellent shape integrity and memory for a heat-activated archwire
- Optimum and consistent performance
- Easy ligation at room temperature
- Outstanding resiliency
- Offers slightly lower forces than the *Bio-Kinetix* Plus Thermally Activated *Nitantium* Archwire
- Ideal in helping with significant crowding cases
- Very responsive to chilling which allows patient to subdue discomfort with cold, temperature items
- Low force provides greater patient comfort and helps control torque early in treatment

Pearl Tone® Preformed Ligature Wires

- Layered with a super smooth non-stick coating
- Brackets glide effortlessly along the archwire
- *Pearl Tone* white in .012" wire diameter

ADJUSTABLE UTILITY ARCHWIRES

Adjustable preformed utility archwires have a convenient 3 mm step-down to fit all situations. Both legs may be adjusted to achieve the desired length. These wires are very popular for use in mixed dentition cases. They are available in three different metals: stainless steel, *Nitanium* Super Elastic, and *Bio-Kinetix* Thermal NiTi.

Stainless Steel Utility Archwire

An adjustable preformed utility archwire with a 3 mm step-down to fit all situations. Both legs may be adjusted to desired length. Very popular for use in mixed dentition cases.

Nitanium Adjustable Utility Archwire

The *Nitanium* anterior segment and stainless steel posterior segments are joined by inconel tubing which allows for precise adjustments in arch length. The 3 mm step-down allows gentle forces to be applied to anterior teeth. The stainless steel posterior provides the heavier forces required to rotate or upright molars, open or close bites and perform other adjustments. Highly recommended for mixed and adult dentition cases.

- More rapid tooth movement without root resorption
- Relief from pain in closed-bite T.M.J. cases
- Frictionless alignment of upper and lower anteriors
- Reduces chair-and-treatment time
- Allows for use of auxiliary springs
- Easy, rapid mid-line corrections
- Reduces bicuspid extractions

Bio-Kinetix Thermal NiTi Utility Archwire

The *Bio-Kinetix* Utility Arch is identical in design and function to our very popular and successful stainless steel and *Nitanium* Utility arches, but uses an anterior wire that offers lighter continuous *Nitanium* forces from the same wire diameter. The result is an adjustable utility arch with a .016 wire in the anterior, for proper slot engagement, producing light forces similar to that expected from .014 wire. It employs the elastic and shape memory characteristics found in the *Nitanium* Utility arch series, and will provide the same predictable results that have come to be expected from our current utility archwires. All of this delivers a gentle, more forgiving movement, enhancing treatment and patient comfort.

* Millimeter size is a measurement of anterior arch from one 90° bend to the other 90° bend.
 ** All Utility Archwires have .016" x .016" stainless steel posterior archwires.

MULTI-STRAND ARCHWIRES

Nitium Multi-Strand Archwires

The Super Elastic NiTi Braid 8 Archwire is an eight-strand super elastic nitinol wire with great flexibility and low stiffness. The Super Elastic NiTi Braid 8 Archwire may be used in the initial stages of treatment to gently level and align while providing torque control with full slot engagement. This wire is also effective in the later stages of treatment by holding the desired torque, but providing additional vertical correction to finish your case.

Stainless Steel Multi-Strand Archwires

We offer three versions of stainless steel multi-strand, preformed archwires: twist archwire — three strands, coaxial archwire — six strands, and braided archwire — eight strands.

Stainless Steel Twist Archwires — Three Strands

This archwire is three fine, round twisted strands that form a single wire.

This wire provides:

- Gentle leveling during early-treatment stages
- Greater deflection before elastic limit is reached
- No fraying when cut
- Bright surface finish
- Moderate force, but drops quickly as teeth move
- Moderate resiliency; measurably better than solid stainless steel wire

Stainless Steel Coaxial Archwires — Six Strands

This archwire consists of five equal-size wires wrapped around a single, same-size core wire.

This wire provides:

- Good resilience, allowing bends to a greater degree than ordinary twist archwire
- A great archwire for the initial treatment stage — good for initial alignment
- Bright finish
- Low to moderate forces
- Short activation time, forces drop quickly as teeth move

Stainless Steel Braided Archwires — Eight Strands

This archwire consists of eight fine, equal-sized Type 302SS wires braided tightly and rolled to the most popular square and rectangle wire sizes. This wire provides the following:

- Super resiliency allowing for early application in treatment
- Fills edgewise slot while offering torque control
- Excellent archwire to use when transitioning from round to rectangular shape
- Easy to ligate
- Low forces
- Does not fray when cut
- Great for aligning and for finishing
- Rectangle wires can be used for added torque control

The Twist and Coaxial Archwires are available in straight length, which can be used for retainers and lingual arches. The precision formed wires can be cut without unraveling. Retainer wires are medium/hard temper to facilitate forming retainers and lingual arches.

STAINLESS STEEL ARCHWIRES

Stainless steel archwires are specifically designed for use with the Straight Archwire Technique. Stainless steel archwires may be used throughout the entire treatment, but are best suited for mid-to-late stages of treatment. A special alloy in the archwire provides maximum spring while minimizing fracturing.

Stainless Steel Archwires are:

- Pre-heat treated
- Excellent for use with all orthodontic/orthopedic techniques
- Available in two finishes: bright or gold
- Available straight or in four different arch forms to accommodate all your preferences
- Straight 14" length diamond drawn to exact tolerances for optimal resilience for every orthodontic application
- Excellent working characteristics, accepts severe bends with minimal fracturing, and is easily soldered

Etched Mid lines for arches:

- Upper — 3 black marks
- Lower — 1 black mark

Australian Super Plus Archwires

Features high strength and spring back with improved bending quality. This wire is ideal for high-force applications.

Ortholoy-Blue Straight Archwires

Ortholoy-Blue heat treatable archwires are available in blue temper (the softest, most popular temper). This archwire may be used "as is," welded with low heat, or soldered. Besides uses for welding and soldering, utilize this archwire when considerable bending is required because it will not fracture. Excellent for use with edgewise arches, lingual arches, retainers, and removable appliances.

The *Mushroom Looped* Archwire is made of CNA Beta III Nickel-Free Wire, which is an advanced special-memory alloy material. The *Mushroom Looped* Archwire has an improved loop shape which increases the efficiency of space closure, anterior intrusion, retraction, and elastic engagement. In addition, the rounded gingival portion of the loop, unlike the traditional T-Looped and similar archwires, is more anatomically shaped resulting in a tissue friendly appliance. Therefore, you will find an increase in patient comfort and satisfaction. We recommend using sizes 24 mm to 40 mm for loop activation between the lateral and cuspid; use sizes 52 mm and 56 mm for loop activation between the cuspid and bicuspid. The *Mushroom Looped* Archwire is available in two packaging options: packs of 5 or in a kit (4 each of size 24 mm to 40 mm: 36 total).

Product features:

- Nickel-Free Beta Titanium
- Bendable
- Smooth, polished surface
- Lower force
- Larger activation range
- Gradual force decay

Treatment benefits:

- Space closure
- Provides anterior intrusion/retraction
- Allows torque or root movement of incisors
- Control of root position of posterior teeth
- Pre-formed loops and consistent force reduce chair time
- Archwire segments can be activated independently

* Millimeter size is an inside measurement around arch form between loops.

Our Keyhole Looped Stainless Steel Archwires are used to gently close spaces with the ideal stiffness to maintain arch form.

This wire is available in two millimeter increments from 22 mm to 44 mm, with two or four Keyhole Loops, as well as a kit containing 100 assorted sizes.

- Versatile in closing spaces, retractions, and arch alignment
- Used in sliding mechanics for extraction space closure and in non-extraction Class II cases
- Available in twin (2) looped design and in quad (4) looped design
- Available in kits “balanced size” of 100 archwires
- Also available in individual packs of 10 archwires

* Millimeter size is an inside measurement around arch form between loops.

The V-Looped Archwire is made of high-tensile, stainless steel with similar properties of the Australian Wires.

- Versatile in closing open bites, space closure, retraction, and elastic engagement
- Great for use with our *Tip-Edge* Rx-1 Brackets and our *Coralex* Brackets
- Available in kits "balanced size" of 24 archwires
- Available in individual packs of 5 archwires
- Also available in two millimeter increments from 22 mm to 44 mm

** Kit includes:

- 1 Rack (Catalog No. 120-000)
- 1 Rack Cover (Catalog No. 120-006MC)
- 1 White Flexible Ruler (Catalog No. 120-022)
- 2 of Each Archwire: 22 mm to 44 mm (24 Archwires)

Posted Archwire Kits
12 assorted sizes in each kit (does not include rack)

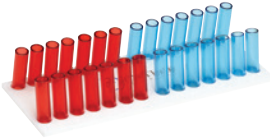

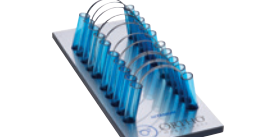

Diameter	Catalog No.
.018 Kit (46 wires)	102-099
.020 Kit (29 wires)	103-099
.016 x .022 Kit (30 wires)	104-099
.017 x .025 Kit (36 wires)	121-099
.018 x .025 Kit (49 wires)	107-099
.019 x .025 Kit (36 wires)	101-099

Posted stainless steel archwires have extra strong, soldered joints and pliable brass posts for ease of adjustment. These archwires assist in retraction of anterior teeth and consolidation of space.

- Assorted sizes to fit all situations
- Excellent for use with elastics and springs
- Uniform post placement
- Available in kits or individual packs

* Millimeter size is an inside measurement around arch form between loops.

ARCHWIRE RACKS AND COVERS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Display Racks for Preformed Archwires* All archwire racks come with self-stick archwire size decals. These archwire racks are excellent organizers for chairside use.</p>	
	<p>Molded Archwire Rack Cover 4½" L x 10" W x 3½" H This cover fits the following Archwire Racks: Cat. Nos. 120-000, 120-003, 120-004 Note: Rack and archwires are not included.</p>	120-006MC
	<p>White Display Rack 4" L x 9½" W x 2⅞" H 14 rows of storage tubes. May order optional clear cover, Cat. No. 120-006MC</p>	120-000
	<p>Nitanium Display Rack 4" L x 9½" W x 2⅞" H Silver acrylic base with 10 rows. May order optional clear cover, Cat. No. 120-006MC</p>	120-004
	<p>Display Racks for Posted Archwires* All archwire racks come with self-stick archwire size decals.</p> <p>Master Posted Rack (Shown with Cover) 14½" L x 9" W x 1¼" H Accommodates three rows of posted archwires and one row of regular <i>Pro Form</i> archwires. (Total of 48 slots) White acrylic base.</p> <p>Master Clear Cover (As shown) 14½" L x 9" W x 3⅞" H</p>	120-002
	<p>Small Posted Rack 4" L x 9½" W x 2⅞" H Base is numbered 22 through 44 to accommodate a full set of posted wires, and includes 12 rows for storage. May order optional clear cover, Cat. No. 120-006MC</p>	120-003
	<p>Covered Small Posted Rack 4¼" L x 10" W x 3½" H Base is numbered 22 through 44 to accommodate a full set of posted wires, and includes 14 rows for storage. The hinged, clear lid keeps archwires sanitary and dust free.</p>	120-003C

*Archwires shown are not included.

ARCHWIRE RACKS AND COVERS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Archwire Box Organizer*</p> <p>Our premier archwire box organizer, is specifically designed to hold our <i>D-LX</i> Arch Form boxes, but can also accommodate our regular archwire envelopes. The modern, reflective silver finish hides finger prints and fits well with the many other metal finishes in an office. It holds up to 12 boxes and can either sit on a counter top or be mounted to a wall. 3$\frac{3}{8}$" L x 7$\frac{3}{4}$" W x 8$\frac{7}{8}$" H</p> <p><small>*Archwires shown are not included.</small></p>	120-018
	<p>Designer Archwire Racks*</p> <p>Constructed from formed clear acrylic that has a translucent green edge giving them the look of designer glass. These racks have tubes mounted inside the structure to hold the archwires. Tubes are divided into red and blue to easily separate upper and lower wires.</p> <p>Large Archwire Rack 4$\frac{1}{4}$" L x 9$\frac{1}{2}$" W x 2$\frac{1}{4}$" H Rack includes 14 rows for storage.</p> <p>Small Archwire Rack 4$\frac{1}{4}$" L x 4$\frac{1}{4}$" W x 2$\frac{1}{4}$" H Rack includes 6 rows for storage.</p> <p>Deluxe Archwire Rack 4" L x 10" W x 4" H Compact in size, yet aesthetically pleasing. The rack fits either standard or <i>Pro Form</i> archwire shapes, and includes 14 rows for storage. The hinged, clear lid keeps archwires sanitary and dust free.</p> <p>Covered Utility Archwire Rack 4$\frac{1}{2}$" L x 10" W x 3$\frac{1}{2}$" H Rack includes 13 rows for storage and each row is color-coded to specify the archwire type: stainless steel, <i>Nitanium</i> (round), and <i>Nitanium</i> (rectangular). This allows for quick and easy identification of the archwires. The hinged, clear lid keeps archwires sanitary and dust free.</p>	<p>120-009</p> <p>120-008</p> <p>120-005</p> <p>120-007</p>

*Archwires shown are not included.

CRIMPABLE HOOKS AND STOPS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Carriere Cu Nitantium Archwires with the Innovative EZ Stops System This new crimpable archwire stop delivery system provides smooth positioning. The unique holder allows clinicians to quickly position the tube stop in a precise location for crimping on the archwire. Threading a crimpable tube stop onto an archwire is quick and easy. No more lost stops!</p> <p>EZ Stops Small (.019"), Qty 20 EZ Stops Large (.030"), Qty 20</p>	<p>430-101 430-102</p>
	<p>Crimpable Archwire Hooks Precision-MIM crimpable hooks are easily crimped onto archwire for precise placement in or outside of the mouth. Crimp tubes create a strong, non-sliding lock with the archwire and remain firmly-in-place during treatment. Ball hook may be bent for right or left applications. All hooks fit round or rectangular archwires up to .018 x .025.</p> <p>Crimpable Archwire Ball Hooks (20 per pack) Crimpable Archwire Power Hooks – Right (20 per pack) Crimpable Archwire Power Hooks – Left (20 per pack) Hook Crimping Pliers (Straight) see page 237 Hook Crimping Pliers (Angled) see page 237</p>	<p>430-010 430-015 430-016 201-435 201-436</p>
	<p>Crimpable Archwire Tubes with Hooks Crimpable Archwire Tubes provide a firm anchor point for a variety of applications. May be positioned anywhere on an archwire by threading the archwire through the tube before engaging the brackets. The tube can then be locked securely into position by crimping it with How Pliers or a dull archwire cutter. (10 per pack)</p> <p>.017 x .025 Crimpable Tubes .019 x .025 Crimpable Tubes</p>	<p>430-022 430-023</p>
	<p>Archwire Stop Lock Ideal for adjustable or tie-back stop applications, spring activation, or for prevention of archwire migration. May be fixed firmly in place by positioning the slotted bolt over the archwire and then tightening the nut – using the Double-Sided Archwire Stop Lock Wrench Cat. No. 430-036 (sold separately). (5 per pack)</p> <p>.022 Archwire Stop Lock .036 Archwire Stop Lock</p>	<p>430-032 430-033</p>
	<p>Archwire Stop Lock with Hook Ideal for anchorage, placement of elastics or springs, and traction applications. Use Double-Sided Archwire Stop Lock Wrench to lock in place PN 430-036 (sold separately). (5 per pack)</p> <p>Rights Lefts</p>	<p>430-034 430-035</p>

CRIMPABLE HOOKS AND STOPS / LIGATURE WIRES

ITEM	DESCRIPTION	CATALOG NO.
	<p>Double-Sided Archwire Stop Lock Wrench Use for application of stop lock and stop lock with hook</p>	<p>430-036</p>
	<p>MIM Crimp Stop Our MIM Crimp Stop may be placed anywhere on an archwire to limit tooth movement or maintain proper archwire positioning. For use with round or rectangular archwire up to .021 x .025. (10 per pack)</p>	<p>430-020</p>
	<p>Micro-Stop Use the Micro-Stop to limit movement or provide anchorage. Thread the product through the archwire to the desired location and crimp with a dull cutter, Weingart Pliers or most any other holding pliers. The small size makes these comfortable for the patient while also being inconspicuous. Available in two sizes. (25 per pack)</p> <p>Small - Fits round wires up to .018" Large - Fits square wire up to .020" x .020" and rectangular wire up to .016" x .025"</p>	<p>430-040 430-041</p>
	<p>Pearl Tone Preformed Ligature Wires Layered with a super smooth non-stick coating. Brackets glide effortlessly along the archwire. Pearl tone white in .012 wire diameter. (100 per pack)</p>	<p>100-420</p>
	<p>Ligature Rotation Wedge Simply ligate this .090 elastomeric wedge under archwire to correct rotations. The .012 ligature wire and clear wedge are threaded together. (25 per pack)</p>	<p>100-406</p>
	<p>Shorty Ligature Twists Made from dead-soft stainless steel wire, these time saving preformed ligatures have ends that are already twisted for quick and easy placement. They fit Shorty Twist Holders or Mathieu Needle Holders. (500 per pack)</p> <p>.010 Shorty Ligature Twists .012 Shorty Ligature Twists</p>	<p>100-412 100-412B</p>

NITANIUM SPRINGS

Applications for Individual Components

Nitium Closing Springs

Excellent for closing spaces and anterior retraction.
Easily engaged to bracket hook, buccal tube hook,
sliding hook, or posted wire hook.

Nitium Ligature Closing Springs

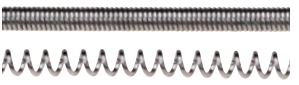

When distance between two hooks exceeds
expansion limitation of this coil spring,
use ligature closing spring to engage hooks.

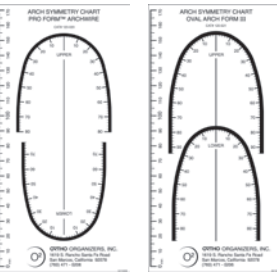

Nitium Open Coil Springs

Provides constant force for maximum
efficiency in opening space when placed
on wire compressed between two brackets.

ITEM	DESCRIPTION	CATALOG NO.
	<p>Nitium 15" Spooled Open Coil Spring Open coil springs provide constant tooth movement, yet are gentle for patients because they are made of super-elastic material. Maximum efficiency in opening spaces when placed on archwire and compressed between brackets. (15" spool)</p> <p>.009 x .030 Open (inner dia.) .010 x .030 Open (inner dia.) .012 x .030 Open (inner dia.) .014 x .030 Open (inner dia.) .010 x .036 Open (inner dia.) .014 x .036 Open (inner dia.) .010 x .045 Open (inner dia.) .012 x .045 Open (inner dia.)</p>	<p>100-750 100-751 100-752 100-753 100-754 100-755 100-756 100-757</p>
	<p>Nitium 7" Length Open Coil Spring This spring can be deflected twice its original length without taking a permanent set. Open coil springs provide constant tooth movement, yet are gentle for patients because they are made of super-elastic material. Provides maximum efficiency in opening or closing spaces when placed on archwire and compressed between two brackets. MISCELLANEOUS

ELASTOMERIC LIGATURE TIES

Ligatures on preloaded cane dispensers are easily engaged under bracket tie wings, yet hold with continuous force. Available in gray or clear. (20 canes per pack, 1000 ligatures total). Non-Latex.

LIGATURE TIES ON CANES (20 PER PACK)	COLOR	DIAMETER	CATALOG NUMBER
	Gray	.110	400-110
	Gray	.120	400-120
	Clear	.110	400-111
	Clear	.120	400-121

TISSUE GUARD

The tissue guard is used to slip over the archwire to prevent irritations and available in gray or clear. It is aesthetic in appearance and odor and stain resistant. Fits wires up to .045." (10' spool). Non-Latex.

COLOR	DIAMETER	CATALOG NUMBER
Clear	.018	400-326
Gray	.018	400-327
Clear	.027	400-330
Gray	.027	400-331
Clear	.046	400-328
Gray	.046	400-329

ELASTIC THREAD

Solid elastomeric material in precision extruded threadform. Exerts continuous long lasting, predictable force. Moisture, odor, and stain resistant. Ideal for rotations, retractions, and figure 8's. Available in gray or clear .025" and .030" diameters. (25' or 50' spools). Non-Latex.

COLOR	DIAMETER	25-FOOT	50-FOOT

Clear	.030	400-037	400-033

CHAIN ELASTIC – NON-LATEX

Standard, Long, Continuous

Made from super-elastic long lasting material that delivers continuous, gentle force for more predictable tooth movement. The thin wall is easier to ligate under tie wings. Moisture, stain, and odor resistant. (15 foot length)

See chart on page 181 for available colors and catalog numbers.

CHAIN ELASTIC – NON-LATEX

Light Force – Short, Long, Continuous

Our light force chain elastic has a 20% lighter force than our regular chain and is excellent for low force treatment mechanics. The thinner chain material is easier to apply, reducing chair time.

LIGHT FORCE CHAIN 15'	COLOR	CONTINUOUS	SHORT	LONG
	Gray	400-313LF	400-314LF	400-315LF
	Clear	400-316LF	400-317LF	400-318LF

UNIVERSAL SPOOL DISPENSER

Keep your spooled products organized. Easy to use dispenser for chain elastic, tissue guard, thread, coil springs, etc. 9½" x 4" x 2½".

TWIN FORCE Bite Corrector Devices

Strength and Durability for Consistent Results

The *Twin Force* Bite Corrector Devices, with their precision machining, are revolutionary orthodontic intraoral devices for the correction of Class II and Class III dental occlusion. Now, even your most non-compliant patients can make the transition to an ideal Class I molar relationship faster, and with less discomfort than any other device on the market.

The *Twin Force* Bite Corrector Devices are easy and quick to use with no adjustment required. And, only the *Twin Force* Bite Corrector Devices offer dual force technology for fast, gentle, continuous force to both the maxilla and mandible.

Get greater results in less time

Class II or Class III correction can take anywhere from 6 to 12 months with standard treatment techniques. The *Twin Force* Bite Corrector Devices can provide the same treatment results in half the time without patient compliance and frequent adjustments.

Benefits include:

Product life has been extended

The Super-elastic nickel titanium springs have been re-designed to provide a dramatic increase in durability, while producing a significantly smoother function of the piston

More robust connections

Components are joined using a continuous laser rotation welding process

Dependable and reliable

Nickel titanium springs exert continual low forces with predictable results in a minimal amount of time

Easy to use

Titanium components provide a secure lock onto the archwire, allowing placement and removal of this single-piece appliance to be done chair side in just seconds

Time and cost savings

No waiting for the lab to fabricate the appliance

Comfortable

Increased lateral excursion not found with most distalizing appliances

Versatile

Suitable for both extraction and non-extraction cases.

Available in two styles: Double Lock and Anchor Wire

Minimal patient cooperation required

TWIN FORCE BITE CORRECTOR DEVICES

Precision is in the parts

The success of the *Twin Force* Bite Corrector Devices are inherent in its exceptional design because it is manufactured to the highest standards in the industry. High-quality titanium clamps and screws reduce slippage. Plus, instead of using traditional hex screws that can strip or loosen, the *Twin Force* Bite Corrector Devices' screws are square for a secure fit. All components are laser welded, ensuring that each part functions as a single unit, minimizing separation.

More hygienic and more comfortable

The *Twin Force* Bite Corrector Devices take functional aesthetic to a new level. The small, smooth, hygienic springs are enclosed in cylinders that don't create food traps. And your patients will appreciate the increased lateral excursion feature which makes the *Twin Force* Bite Corrector Devices more comfortable than other Class II correction devices.

Twin Force Bite Corrector Devices are available in Anchor Wire and Double Lock configurations, in two sizes.

TWIN FORCE BITE CORRECTOR DEVICES

Twin Force Bite Corrector Double Lock

CARRIERE MOTION CLASS II APPLIANCE

Turn Class II Into Simple Class I Patients

A huge move in the right direction for orthodontics.

To limit extractions and to turn difficult Class II patients into simpler Class I patients is a dream come true for you and your patients. With its sleek, aesthetic, and non-invasive design, the *Motion* Class II Correction Appliance provides greater comfort and shortens treatment time by up to four months. Delivering a natural, gentle, and uniform force for distal molar movement with controlled rotation and tipping correction before brackets or other appliances are placed, the *Motion* Appliance solves complex problems almost effortlessly.

The Motion Philosophy

- Fast.** Shortens overall treatment time by up to four months as it treats Class II correction at the beginning of the orthodontic treatment, when there are no competing forces in the mouth caused by brackets or other appliances. A Class II correction can usually be completed in an average of 3-4 months.
- Natural.** Mimicking a human hip ball-socket joint, the *Motion* Appliance allows the first molar to rotate and upright in its natural and correct finishing position, producing a continuous, natural, and uniform force for distal molar movement with controlled rotation and tipping correction. Built-in stops engineered in the appliance prevent the molars from over-rotating and the crowns from distal tipping. The *Motion* Appliance's low forces are biologically compatible during the Class II treatment.
- Gentle.** The low force of the *Motion* Appliance is gentle on your patients, and its low profile design is very comfortable to wear. By treating the Class II platform first, it simplifies the entire treatment for you, and provides greater comfort for your patients.

GOING FROM CLASS II TO CLASS I HAS NEVER BEEN EASIER.

The *Motion* is a direct bond appliance that attaches to the maxillary canine and first permanent molar, providing a simple procedure for turning complex Class II patients into a Class I platform. Once a Class I condition is achieved, malocclusions become easier to treat and can be finished with your preferred orthodontic technique. Since there are no competing forces in the mouth when using this appliance, average Class II correction can usually be achieved in just three to four months.

- Eliminates wire changes and the distorting collateral forces that appear with every wire activation used in traditional methods.
- Minimizes root resorption.
- Patients are treated faster with less discomfort.
- High level of patient compliance as the appliance is aesthetically pleasing, and used during the initial phase of treatment when patient's motivation is still high.

Fig A
Motion Appliance with *Carriere* Oral Elastic attached to hook on the cuspid pad. Class I Platform is present when a cuspid occlusion, in which centric relation coincides with centric occlusion, and the molar occlusal relationships are a perfect Class I.

How it Works.

- Corrects the posterior occlusion to an ideal Class I platform first by rotating and uprighting the maxillary first molars while distalizing the posterior segment, from canine or premolar to molars, into a perfect occlusion.
- Simultaneously produces a light, uniform force for distal molar movement.
- Independently moves each posterior segment, from canine or premolar to molar, as a unit.
- Used at the beginning of treatment when there are no competing forces in the mouth allows the distalization of the molars and premolars from 3 to 6 mm range, on average.

Indications.

- Most effective in treating Class II symmetrical and asymmetrical malocclusions without the need for extractions.
- May also be used in many Class I patients with mesially positioned maxillary molars.
- Growing patients are ideal, but adults may be treated as well.
- Mixed dentition Class II patients with fully erupted molars are candidates for Phase 1 treatment to establish a Class I platform.

MOTION APPLIANCE

EASE OF PLACEMENT.

The *Motion* Appliance is placed on the maxillary arch, but requires a solid and consistent source of anchorage in the mandibular arch to avoid protrusion of the lower incisors (a lower Essix Appliance with direct bonded tubes on lower molars, a passive lingual arch, a full mandibular fixed appliance, or mini-screws). Once the appliance is bonded, the *Carriere* Oral Elastics are attached from the mandibular molar to the hook of the maxillary cuspid of the *Motion* Appliance to activate.

The Movement Created by the Motion Appliance.

Bodily distalizes the maxillary posterior segments as a block while correcting upper first molar rotation and uprighting. The posterior portion of the *Motion* Appliance accomplishes three types of molar movement:

1. Uprighting of the crown, if it is mesially inclined (*Fig. 01*). Once the molar has been uprighted, the articulation of the ball with the socket prevents distal tipping.
2. Distal rotation around the palatal root. When the maxillary first molar is mesially rotated around the palatal root, the molar occlusion may appear

to be Class II, while in reality it is Class I with the canines in a cusp-to-cusp relationship (*Fig. 02*). When the molar has been de-rotated, the shoulder of the posterior base contacts the mesial arm to prevent over-rotation.

3. Distal displacement without concurrent distal tipping of the crown.

Fig 01 – Provides controlled molar rotation and uprighting.

Fig 02 – The maxillary molars are distalized and rotated, providing a platform for maxillary canines to occlude in a Class I relationship.

Fig 03 – With mesially rotated molars, cuspid cannot occlude in Class I relationship.

Fig 04 – Independently moves each posterior segment, from canine or premolar to molar, as a unit.

TransForce² Arch Developer Appliance

The next generation in expansion

TransForce² Arch Developers are available in two styles, Transverse and Sagittal. Each of these appliances can be used to treat all classes of malocclusion and are excellent for mixed dentition. Both styles mount lingually, making them very inconspicuous and require zero patient compliance. The *TransForce²* Arch Developer Appliances were developed in consultation with Dr. William J. Clark, the inventor of the *Clark Twin Block*[®].

Virtually Invisible Assistance for Arch Development

Designed for ease of use, the *TransForce²* Arch Developer Appliances are preprogrammed to allow appliances to be placed without laboratory work. Both the Transverse and Sagittal styles may be placed using first molar bands with standard .036" x .072" lingual sheaths.

Each *TransForce²* Arch Developer Appliance may be easily adjusted per patient. In addition, each expander module contains *Nitanium* Coil Springs generating approximately 200 grams of gentle biocompatible force.

The Transverse and Sagittal Appliances are available in multiple sizes, individually or a starter assortment kit. Best of all, the developers are universal, which allows for less inventory as they can be used for either upper or lower arch development.

Dr. William J. Clark

ARCH DEVELOPER APPLIANCE

ITEM	DESCRIPTION
------	-------------

TransForce² Transverse Arch Developer

The Transverse Appliance has an expansion module to increase the inter-canine width (expands at the cuspids) and may be used in the upper or lower arch when expansion is required to accommodate crowding in the labial segments, or to correct arch width in constricted arches.

CATALOG NUMBER	COLOR-CODE	TRANSVERSE SIZE				MAXIMUM AMOUNT OF INTER-CANINE EXPANSION

Nitanium Palatal Expander² Multi-Purpose Finishing Appliance

The easy to use *Nitanium Palatal Expander²* takes expansion a step beyond

This extraordinary expansion appliance has the capacity to rotate, upright, distalize, and expand the anterior and posterior arches with gentle biocompatible force.

The *Nitanium Palatal Expander²* Appliance's action is the result of transition temperature and shape memory. Warmth within the patient's mouth activates movement in the thermal nickel titanium energy wire toward the appliance's pre-programmed shape. This produces the desired expansion in unison with tooth movement. Once the exact correction is achieved, the appliance stops expanding and lies passive.

The *Nitanium Palatal Expander²* Appliance offers many benefits, including the following:

- Slower expansion has shown to lower incidents of relapse*
- Thermally-activated *Nitanium* for total control eliminating patient's compliance
- Ease of placement and removal by the doctor
- Orthology arms and loops provide adjustability for fine-tuning and finishing
- No laboratory work is required – available in 10 sizes

MOLAR ROTATION APPLIANCE

Nitanium Molar Rotator² Multi-Purpose Finishing Appliance

For patients requiring upper first molar rotation and stabilization

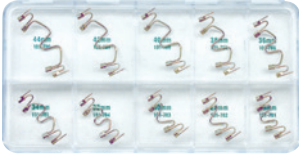

The *Nitanium Molar Rotator²* Appliance provides predictable rotation, torquing, and expansion in a pre-programmed appliance.

Advances in thermally activated nickel titanium provide the activating forces in this truly unique appliance. After insertion into the maxillary first molar lingual sheaths, the appliance provides a constant force to ensure the desirable end result.

The *Nitanium Molar Rotator²* Appliance offers many benefits, including the following:

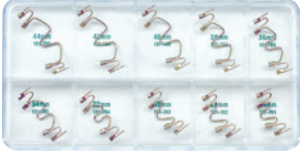

- Slower expansion has shown to lower incidents of relapse*
- Thermally-activated *Nitanium* for total control eliminating patient's compliance
- Ease of placement and removal by the doctor
- Orthology arm and loops provide adjustability for fine-tuning and finishing
- No laboratory work is required – available in 10 sizes
- Excellent for mixed dentition and adolescent cases
- Consistent and predictable end results

	Lingual Sheath .036" x .072" horizontal hook, slotted, latching indent. Available in 10/pk • UR/LL • UL/LR This lingual attachment may be welded to create your preferred band assembly.	971-036 971-037
	Lingual Sheath With vertical hook. Available in 10/pk • UR/LL • UL/LR This lingual attachment may be welded to create your preferred band assembly.	971-038 971-039

* For easy identification, each rotator has size numbers permanently stamped on the assembly.
 ** Rotators are for single-use only.

MULTI-DISTALIZING ARCH (MDA) APPLIANCE

A Fixed Appliance for Non-Extraction Cases

The *Multi-Distalizing Arch (MDA)* Appliance is a true multi-treatment device which reduces treatment time and cost, while improving patient comfort and cooperation.

Class II malocclusions may be corrected by combinations of restriction or redirection of maxillary or mandibular growth, distal movement of the maxillary dentition and mesial movement of the mandibular dentition. To establish a Class I molar relationship, and create space in the lateral segments for the canines or premolars in non-extraction treatment modalities, you must first distalize the maxillary first molars. Many treatment techniques require the use of extra-oral forces, such as headgear, requiring strict patient compliance.

The MDA Appliance allows non-extraction treatment in severely crowded cases by allowing distal movement for creating space. First and second molars can successfully be distalized up to 8-10 millimeter without tipping. The appliance is not phase dependent and therefore can be used in mixed dentition.

The MDA Appliance may be used for:

- Rapid bilateral or unilateral molar distalization in mandible or maxilla
- Rapid anterior retraction in maxilla
- Rapid anterior intrusion in maxilla

.042 Distal wires

Fit .045 face bow tubes

Adjustable distal loops

.016 x .022 anterior wire

For applying torque early in treatment

Pro Form Arch shape

For natural arch form

Marked midline

For easy placement

Elastic Hook

Use Class II elastics to prevent flaring of anterior teeth

AUXILIARY PRODUCTS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Nitinium Variable Force Spring This fixed spring may be used for non-compliant patients who will not wear their elastics. The spring provides up to 570 grams of force. (4 per pack) .020 x .100</p>	100-695
	<p>Nitinium Open Coil Spring .010 x .045 15" spool</p>	100-756
	<p>Elite Buccal Tubes Available loose, direct bond or prewelded to bands. Please reference pg. D-8 for more information.</p>	

OTHER DISTALIZING APPLIANCES

ITEM	DESCRIPTION	CATALOG NO.
	<p>K-Loop Molar Distalizing Appliance</p> <p>Developed in Consultation with Dr. Varun Kalra</p> <p>Used to distalize molars in a more bodily fashion as the special V-bend in the K-Loop Appliance moves both the crown and root distally. Made of .017" x .025" CNA Beta III Titanium archwire, the K-Loop Appliance produces gentle continuous forces for efficient and effective tooth movement. (5 per pack)</p> <p>Activation:</p> <p>Step 1: Insert K-Loop Appliance into first molar tube and first premolar bracket. Place a mark just mesial to the molar tube and distal to the premolar bracket.</p> <p>Step 2: Place 2.0 mm high step bend 2.0 mm distal to the molar mark and 2.0 mm mesial to the premolar mark.</p> <p>Step 3: Insert K-Loop Appliance in place and ligate into premolar bracket. Place a cinch back bend mesial to the premolar bracket as shown.</p> <p><small>Ask for YOUR FREE COPY of Dr. Kalra's Article on the K-Loop Distalizing Appliance • 999-187 (English Version)</small></p>	<p>034-000</p>

Fixed Lingual Controlled Arch

Can be used for applications such as control of rotation, uprighting and stabilization, and space maintenance. A simple fixed "U" shaped stainless steel appliance that fits into standard .036" x .072" horizontal lingual sheaths. Available in sizes 1 through 4. Use in maxillary or mandibular arches.

CNA Reverse (Mesial) Loop Palatal Arch

Designed to control upper first molars with gentle biocompatible force, the loop is reversed to point toward the anterior of the palate reducing patient gag reflex. The Palatal Arch design fits .036" x .072" lingual sheaths and provides control of upper first molars. The arch is contoured to fit the upper palate and can be easily adjusted to fit individual patients.

ANCOR PRO

Temporary Orthodontic Anchorage System

The Most Innovative Treatment Option Takes a New Turn

Establishing and maintaining effective anchorage is key to gaining control over both the quality of the results and the duration of many of your orthodontic treatments.

The *Ancor Pro* Orthodontic Anchorage System allows you to have greater control of patient outcomes by providing increased stabilization compared to traditional stabilization techniques.

With the turn of a screw, the *Ancor Pro* Anchor delivers absolute anchorage, and decreased reliance on patient compliance.

Superior Versatility, Simplicity, and Ease Of Use – By Design.

Developed by a team with more than 25 years of implant industry experience, the *Ancor Pro* Orthodontic Anchorage System has been specially designed to provide anchorage in a wide range of clinical applications, while offering simplicity, ease of use, and patient comfort.

Multi-functional Single Head

Supragingival head features an upper button and undercut for the attachment of elastic chain, closed loop coil springs and other auxiliary orthodontic devices. Tapered conical top features a lumen to accept wires up to .022" in diameter. This innovative multi-functionality means greater procedural versatility and streamlined inventory control.

Self-tapping & Self-drilling Mechanics

Sharp screw tips and threads allow for easy placement and removal chairside without general anesthesia.*

*Local anesthesia is suitable, in most cases

Ancor Pro Anchors are available in three popular sizes – 6 mm, 8 mm, 10 mm, and 1.6 mm diameter; made from Grade 5 Titanium; providing maximum strength for ultimate performance.

ANCOR PRO ANCHORAGE SYSTEM

The Absolute Anchorage System.

Ancor Pro Orthodontic Anchorage System provides a new means for increased stabilization in a variety of treatments. Moreover, it is backed by the rigorous quality control you have come to expect from our company.

Rely on the *Ancor Pro* Orthodontic Anchorage System with confidence for the following treatments:

- Distalization of molars in the mandible and maxilla
- Mesialization of individual teeth or entire groups of teeth
- “En-masse” retraction
- Class II sliding mechanics
- Asymmetric Class II
- Space closure in a Class I occlusion
- Asymmetric occlusal plane

Due to the increased load tolerance and simplified

Complete system – the *Ancor Pro* Orthodontic Anchorage System includes an autoclavable, fully loaded kit that allows for easy storage of all components while not in use.

biomechanics of the *Ancor Pro* Orthodontic Anchorage System, you can now establish immediate and absolute anchorage in locations previously impossible without invasive procedures such as orthognathic surgery and/or the extraction of teeth. This is also an alternative to the need for traditional devices such as headgear and other extraoral appliances.

Less Treatment Time. Less Reliance on Adherence. More Support.

With its advanced design, innovative features, and proven benefits, the *Ancor Pro* Orthodontic Anchorage System will increase patient comfort and help shorten treatment time.

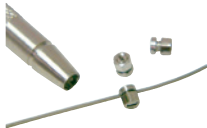

*Ratchet sold separately from kit.

Quality and engineering come together for superior performance

The *Triumph* Orthodontic Instrument line provides the orthodontic professional an exquisite product offering of instruments. The attention to detail in the engineering of these durable, high-quality instruments is unmatched in the industry.

Every instrument offers:

Bonding pliers offer a smooth, radius joint

Instrument tips stay aligned and perform smoothly for stress-free use

Laser engraved part number and applicable wire sizes for easy identification

Triumph Instruments feature supreme quality backed by the following warranties:

- 10 years for Benders and Utility Pliers
- 7 years for Cutters
- 1 year for Mathieus

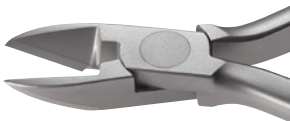

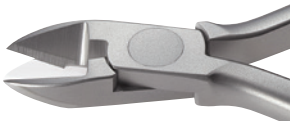

- A. Maximum performance stainless steel insert
- B. Diamond-honed cutting edges
- C. High-quality, corrosion resistant stainless steel forgings
- D. Ergonomic design for maximum comfort and safety
- E. Stunning satin finish reduces glare for precise treatment

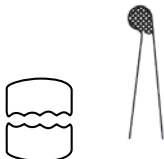

TRIUMPH CUTTING INSTRUMENTS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Distal End Cutter (Safety Hold) Shear cuts hard wire, and can easily cut all types of wires ranging from .012" (.30 mm) to .021" x .025" (.53 mm x .64 mm).</p>	<p>205-101</p>
	<p>Distal End Cutter (Safety Hold) w/Long Handle Long handle option that can easily cut all types of wires ranging from .012" (.30 mm) to .021" x .025" (.53 mm x .64 mm).</p>	<p>205-101XL</p>
	<p>Hard Wire Cutter Designed to cut hard wire up to .022" x .028" (.56 mm x .71 mm).</p>	<p>205-104</p>
	<p>Multi-Use Cutter Designed to cut soft-wire pins and ligature wire up to .015" (.38 mm).</p>	<p>205-105</p>
	<p>Mini Pin & Ligature Cutter The smaller tips on this model allow access into hard-to-reach areas. Designed to cut soft-wire pins, elastics, and ligature wire up to .012" (.30 mm).</p>	<p>205-106</p>
	<p>Micro Mini Pin & Ligature Cutter The fine tips on this model allow access into hard-to-reach areas. Designed to cut soft-wire pins, elastics, and ligature wire up to .012" (.30 mm).</p>	<p>205-107</p>

	<p>Crown & Band Contouring Pliers Ideal for reshaping molar bands and crowns.</p>	<p>205-221</p>

TRIUMPH WIRE FORMING INSTRUMENTS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Jarabak Pliers Excellent for precise wire bending and forming of loops. The fine serrations on the square beak and three precision grooves permit accurate and intricate bends and loops. Wires up to .020" (.51 mm)</p> 	205-301
	<p>Three Jaw Pliers Adjust clasps, retainers, and archwires without marring the wire. The precision tips are carefully beveled to create extreme accuracy in adjustments. Wires up to .030" (.76 mm)</p> 	205-302
	<p>Bird Beak Pliers An instrument for all types of wire bending. The round and pyramid shaped tapered beaks will work with any size wire up to .030" (.76 mm).</p> 	205-304
	<p>Light Wire Pliers with Groove Precision tapered beaks allow intricate bends and loops in archwires up to .020" (.51 mm). The groove ensures a no-slip grip.</p> 	205-305
	<p>Tweed Loop Forming Pliers Excellent for making precise loops in .045" (1.1 mm), .060" (1.5 mm), and .075" (1.9 mm) diameters in wires up to .022" x .025" (.53 mm x .64 mm).</p> 	205-306
	<p>Rectangular Arch Forming Pliers Easily torque and bend wires without nicking the archwire. .070" (1.8 mm) blade width. Wires up to .022" x .025" (.53 mm x .64 mm)</p> 	205-308

TRIUMPH WIRE FORMING INSTRUMENTS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Lingual Arch Forming Pliers Forms double-back and triple-back bends in .030" and .036" wire for lingual sheaths.</p> 	<p>205-309</p>
	<p>Hollow Chop Contouring Pliers Smooth working surfaces allow for consistent forming and contouring of arches up to .030" (.76 mm).</p> 	<p>205-310</p>
	<p>Light Wire Pliers Precision tapered beaks allow intricate bends and loops in archwires up to .020" (.51 mm).</p> 	<p>205-318</p>
	<p>Stop (V-Bend) Pliers Place an accurate 1 mm V-Bend with one simple squeeze to shorten archwire or provide a positive stop. Wires up to .022" x .025" (.53 mm x .64 mm)</p> 	<p>205-321</p>
	<p>NiTi Three Jaw Pliers Bends and forms NiTi and all other archwires up to .020" (.51 mm).</p> 	<p>205-322</p>
	<p>Bird Beak Pliers with Cutter A versatile instrument that bends and cuts archwires up to .022" x .025" (.53 mm x .64 mm).</p> 	<p>205-325</p>

TRIUMPH WIRE FORMING PLIERS/LIGATING INSTRUMENTS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Long Tapered Bird Beak Pliers Long tapered beaks allow for intricate bends of archwires up to .022" x .025" (.53 mm x .64 mm).</p>	<p>205-326</p> 
	<p>NiTi Distal Cinch Back Pliers Cinches and bends NiTi wire distal to buccal tube. Wires up to .025" (.63 mm)</p>	<p>205-327</p>
	<p>Narrow Tip The narrow tip Mathieu style needle holder has serrated tips. Safety Lock reduces the chances of gloves catching in the ratchet, while the double spring allows instant opening and closing. Excellent for placement of ligature wires and elastomeric ties.</p>	<p>205-402</p> 
	<p>Smaha Ultra Fine Tip The ultra fine tip Mathieu style needle holder has serrated tips. This Mathieu instrument is exceptional for use when placing elastic ligature ties. Safety Lock reduces the chances of gloves catching in the ratchet, while the double spring allows instant opening and closing.</p>	<p>205-403</p> 

ITEM	DESCRIPTION	CATALOG NO.
	<p>Silicone Instrument Lubricant Specially formulated lubricant and rust inhibitor for the care of surgical instruments. One drop after each sterilization cycle is all that is needed to help extend instrument life, and to maintain smooth and proper operation.</p>	<p>600-123 (1/2 oz) 600-124 (4 oz)</p>

TRIUMPH INSTRUMENT WARRANTY POLICY

Warranty Policy: *Triumph* Orthodontic Instruments provide warranty against material defects and craftsmanship for the life of the product. Cutters are guaranteed for seven (7) years, benders and utility pliers for ten (10) years, and Mathieu pliers are guaranteed for one (1) year. This covers corrosion, joint failure, and breakage under normal use. Proper cleaning and maintenance is required to maintain the warranty. This warranty may be void if instruments are not properly cared for, including cleaning and lubrication. *Ortho Organizers* reserves the right to decide whether an instrument is to be repaired or replaced. Sharpening cutters and repairing minor tip damage is not covered by warranty as it is considered routine maintenance for normal use.

Cleaning:

Clean and remove any bulk debris immediately after use. Use an enzymatic cleaning solution in an ultrasonic cleaner to clean instruments. Your ultrasonic solution should be changed daily. Hinged instruments should be cleaned and sterilized in the open position. Discoloration and oxidation may occur if instruments are improperly cleaned. To increase the life of your instruments, clean them well. Use detergents and disinfectants suitable for use with medical and/or dental instruments. Follow manufacturer's instructions related to concentration and length of exposure.

Lubrication:

To increase the life of your instruments, routine lubrication is recommended. Prior to sterilization, lubricate instruments. This should be done at least weekly. Use only lubricants designed for precision hinged instruments. If using a dry heat sterilizer, be sure to use a lubricant that is compatible with the operating temperatures of your dry heat unit.

Sharpening:

Regular sharpening of your cutter will increase its service life, and its ability cut more effectively. Frequency of sharpening depends on: the frequency of use, as well as, the types and diameters of wires on which the cutter is being used. Check cutters frequently to assess if sharpening is needed.

Sterilizing:

Instruments should be in the open position when sterilized. The most efficient method is steam autoclave. *Triumph* Orthodontic instruments are actually designed for use with steam autoclave. Steam autoclaves will not dull cutters. Other types of sterilizing methods include chemical vapor or dry heat. Using cold sterilants is not recommended. If used, they can chemically attack your instruments. All sterilizing units must be clean and operating properly.

Corrosion:

Triumph Orthodontic Instruments are very resistant to corrosion. You can prevent corrosion problems by properly following all manufacturers' recommendations. Discoloration may appear that may not be corrosion. Organic materials that remain can give the appearance of corrosion and be mistaken for rust. Never mix a corroded instrument with new instruments as oxidation may be spread to new instruments. It is recommended that a corroded instrument be discarded and replaced.

Routine Maintenance and Non-Warranty Repairs: Do not send instruments directly to us for routine maintenance, sharpening, or reconditioning six (6) months after purchase or later. Normal maintenance, including re-sharpening and reconditioning, may be obtained at:

Henry Schein® Pro Repair • (800) 367-3674 • 1666 East Touhy Avenue • Des Plaines, IL 60018 • www.prorepair.com • prorepair@henryschein.com

Alternative maintenance providers may also be used. *Ortho Organizers* does not warrant actions by any maintenance service providers, and assumes no responsibility for the results of any maintenance services performed.

ENDURA PLUS Orthodontic Instruments

Performance, Usability, and Guaranteed Reliability

Our new *Endura Plus* Pliers have been designed and manufactured with an attention to detail that will assure enhanced performance and longevity. The care and precision that goes into each and every instrument will ensure a quality you can rely on every time you pick one up!

Quality Features Include:

Superior performance
stainless steel inserts

Smooth and
contoured edges

Reliable flush
screw joint

Polished corrosion-
resistant finish

Laser-engraved part
numbers and
applicable wire sizes
on handles

Lifetime warranty against
material defects and
craftsmanship

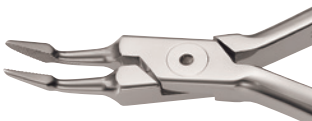

ENDURA PLUS CUTTING INSTRUMENTS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Distal End Cutter (Safety Hold) Can easily cut all types of wires ranging from .012" (.30 mm) to .021" x .025" (.53 mm x .64 mm).</p>	204-101
	<p>Distal End Cutter (Safety Hold) w/Long Handle Long handle option that can easily cut all types of wires ranging from .012" (.30 mm) to .021" x .025" (.53 mm x .64 mm).</p>	204-101XL
	<p>Small Distal End Cutter (Safety Hold) w/Long Handle Compact tips for easier access. Safety hold is ideal for cutting wires within the patient's mouth. Pliers shear-cut hard wires close to the buccal tube and hold loose wire. Maximum cutting capacity: archwires up to .019" x .025" (.48 mm x .64 mm).</p>	204-338
	<p>Distal End Cutter Safety Hold & Flush Cut The safety hold cutter cuts flush distal to the buccal tube. Cuts all types of wires from .010" (.25 mm) up to .020" (.51 mm). Replacement Silicone Insert (3 per pack)</p>	204-111 205-011
	<p>Hard Wire Cutter, 15° Angled Designed to cut hard wires ranging from .010" (.25 mm) to .022" x .028" (.56 mm x .71 mm).</p>	204-103
	<p>Multi-Use Cutter Designed to cut soft-wire pins and ligature wire up to .015" (.38 mm).</p>	204-105

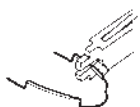

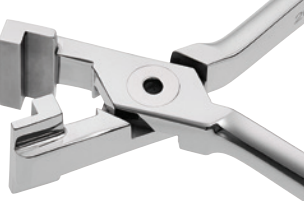

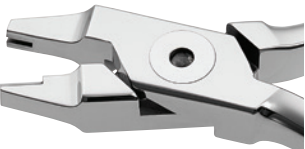

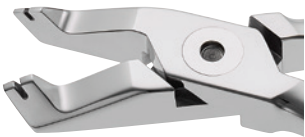

ENDURA PLUS CUTTING INSTRUMENTS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Micro Mini Pin & Ligature Cutter The fine tips on this model allow access into hard-to-reach areas. Designed to cut soft-wire pins, elastics, and ligature wire up to .012" (.30 mm).</p>	204-107
	<p>Micro Mini Pin & Ligature Cutter w/Long Handle Long handled option that allows even easier access into those hard-to-reach areas. Also designed to cut soft wires up to .012" (.30 mm).</p>	204-107XL
	<p>Micro Mini Pin & Ligature Cutter, 15° Angled 15° offset with fine tips allow access into hard-to-reach areas. Designed to cut soft-wire pins, elastics, and ligature wire up to .012" (.30 mm).</p>	204-109
	<p>Micro Cutter The extra fine tips allow access to tight inter-bracket areas. Designed to cut soft-wire pins, elastics, and ligature wire up to .012" (.30 mm).</p>	204-110

ENDURA PLUS UTILITY INSTRUMENTS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Slim Weingart Pliers Serrated tips hold wires firmly in the mouth. Tapered beaks fit easily into hard-to-reach areas.</p>	204-202
	<p>How Pliers Serrated tips are designed for superior wire gripping. How Pliers are useful for placement and removal of archwires pins, and other auxiliaries.</p>	204-203

ENDURA PLUS UTILITY INSTRUMENTS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Utility Arch Pliers Special design with 3 mm step for accurate utility arch construction. The notches in pliers' beak crimp preformed utility archwires into proper position.</p> 	<p>204-334</p>
	<p>Angled Utility Arch Pliers Angled beak with pin simplifies the placement and manipulation of preformed utility archwires. Forms 3 mm steps for accurate utility arch construction. Preformed utility archwires can be easily crimped in the mouth.</p> 	<p>204-335</p>
	<p>3 mm Utility Pliers Automatically form a 3 mm step in archwire. Excellent instrument for bending utility archwires.</p>	<p>204-336</p>
	<p>Crown & Band Contouring Pliers Ideal for reshaping molar bands and crowns.</p>	<p>204-221</p>
	<p>Hook Crimping Pliers, Straight Designed for placement and securing of crimpable archwire hooks and power hooks. Straight beak allows for direct placement of hook on archwire.</p>	<p>204-332</p>
	<p>Hook Crimping Pliers, Angled Designed for placement and securing of crimpable archwire hooks and power hooks. Angled beak allows for precise placement of hook on archwire.</p>	<p>204-333</p>

ENDURA PLUS DEBONDING INSTRUMENTS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Adhesive Removing Pliers Superior tip design allows easy access to remove excess adhesive after debonding. Double ended replaceable blade.</p> <p>Adhesive Remover - Replacement Blade Adhesive Remover - ¼" Replacement Pads (6)</p>	<p>204-206</p> <p>205-206B 205-206T</p>
	<p>Posterior Band Removing Pliers, Long Safely and quickly removes posterior bands. The pointed tip slides under the band while the plastic tip protects the occlusal surface of the tooth for easy band removal and patient comfort.</p> <p>Band Remover ⅜" Replacement Pads (6) Band Remover ¼" Replacement Pads (6)</p>	<p>204-207</p> <p>205-207T 205-207TT</p>
	<p>Direct Bond Bracket Removing Pliers Safely and easily removes steel, ceramic, and plastic direct bond brackets and remaining adhesive from the tooth surface.</p>	<p>204-213</p>
	<p>Debonding Pliers Safely and easily removes steel, ceramic, and plastic direct bond brackets and remaining adhesive from the tooth surface.</p>	<p>204-219</p>
	<p>Angulated Debonding Pliers The angulated design quickly and easily removes anterior and posterior direct bond brackets.</p>	<p>204-220XL</p>

ENDURA PLUS WIRE FORMING INSTRUMENTS

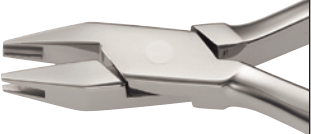

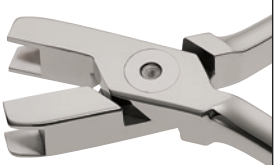

ITEM	DESCRIPTION	CATALOG NO.
	<p>Jarabak Pliers Excellent for precise wire bending and forming of loops. The fine serrations on the square beak and three precision grooves permit accurate and intricate bends and loops. Wires up to .020" (.51 mm)</p>	204-301
	<p>Three Jaw Pliers Adjust clasps, retainers, and archwires without marring the wire. The precision tips are carefully beveled to create extreme accuracy in adjustments. Wires up to .030" (.76 mm)</p>	204-302
	<p>Bird Beak Pliers An instrument for all types of wire bending. The round- and pyramid-shaped tapered beaks will work with any size wire up to .030" (.76 mm).</p>	204-304
	<p>Light Wire Bird Beak Pliers w/Groove Precision-tapered beaks allow intricate bends and loops in archwires up to .020" (.51 mm). The groove ensures a no-slip grip.</p>	204-305
	<p>Tweed Loop Forming Pliers Excellent for making precise loops in .045" (1.1 mm), .060" (1.5 mm), and .075" (1.9 mm) diameters in wires up to .022" x .025" (.53 mm x .64 mm).</p>	204-306
	<p>Arch Bending Pliers Easily torque and bend wires without nicking the archwire. .070" (1.8 mm) blade width. Wires up to .022" x .025" (.53 mm x .64 mm)</p>	204-307

ENDURA PLUS WIRE FORMING INSTRUMENTS

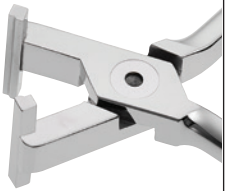

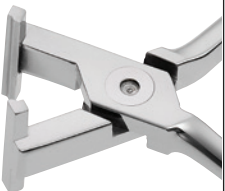

ITEM	DESCRIPTION	CATALOG NO.
	<p>Lingual Arch Forming Pliers Forms double-back and triple-back bends in .030" (.76 mm) and .036" (.91 mm) wire for lingual sheaths.</p>	204-309
	<p>Hollow Chop Contouring Pliers Smooth working surfaces allow for consistent forming and contouring of arches up to .030" (.76 mm).</p>	204-310
	<p>Mini Three Jaw Pliers Precision tips for accurate wire and clasp adjusting and contouring. Also excellent pliers for bonding of orthopedic appliances. Superior strength for wires up to .030" (.76 mm).</p>	204-312
	<p>Light Wire Bird Beak Pliers Precision tapered beaks allow intricate bends and loops in archwires up to .020" (.51 mm).</p>	204-318
	<p>Nance Loop Forming Pliers Precision loop forming with four step tip (3, 4, 5, and 6 mm). Excellent for wires up to .022" (.53 mm). Non-serrated tips and beveled edges prevent wire scoring.</p>	204-319
	<p>Loop Tie Back Pliers Four-step pliers automatically form loops on wire up to .020" (.51 mm) with one motion. Closing loops are easily made to desired height.</p>	204-328

ENDURA PLUS WIRE FORMING INSTRUMENTS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Adams Pliers Tapered square beaks; .045" (1.1 mm) at tip and parallel at 1 mm opening, ideal for placing all types of attachments or bending wire up to .40" (1.0 mm).</p>	<p>204-320</p>
	<p>Stop (V-Bend) Pliers Place an accurate 1 mm V-bend with one simple squeeze to shorten archwire or provide a positive stop. Wires up to .022" x .025" (.53 mm x .64 mm).</p>	<p>204-321</p>
	<p>Optical Pliers Round and concave beaks bend round or rectangular wire with a firm grip that will not score wire. Easily bends and forms all types of wire up to .022" x .025" (.53 mm x .64 mm).</p>	<p>204-323</p>
	<p>Bird Beak Pliers w/Cutter A versatile instrument that bends and cuts wire ranging from .015" (.38 mm) to .025" (.64 mm).</p>	<p>204-325</p>
	<p>Torquing Pliers Set w/Key Specifically designed to place torquing bend into the small sections of archwires (such as a bend for a single tooth) without distorting adjacent sections of the archwire. Two-piece set consists of one torquing plier and corresponding key.</p>	<p>204-337</p> 

ENDURA PLUS DETAILING STEP INSTRUMENTS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Detailing Step Pliers .50 mm Double-sided offset beak permits bayonet bends. Creates right-hand or left-hand step-up or step-down at .50 mm increments.</p>	204-329
	<p>Detailing Step Pliers .75 mm Double-sided offset beak permits bayonet bends. Creates right-hand or left-hand step-up or step-down at .75 mm increments.</p>	204-330
	<p>Detailing Step Pliers 1 mm Double-sided offset beak permits bayonet bends. Creates right-hand or left-hand step-up or step-down at 1 mm increments.</p>	204-331

ENDURA PLUS INSTRUMENT WARRANTY POLICY

Warranty Policy: *Ortho Organizers* warrants *Endura Plus* instruments to be free from material defects and craftsmanship for the life of the product. Cutters, benders, and utility pliers are guaranteed for three (3) years. This covers corrosion, joint failure, and breakage under normal use. Proper cleaning and maintenance is required to maintain the warranty. This warranty may be void if instruments are not properly cared for, including cleaning and lubrication. *Ortho Organizers* reserves the right to decide whether an instrument is to be repaired or replaced. Sharpening cutters and repairing minor tip damage is not covered by warranty as it is considered routine maintenance for normal use.

Cleaning:

Clean and remove any bulk debris immediately after use. Use an enzymatic cleaning solution in an ultrasonic cleaner to clean instruments. Your ultrasonic solution should be changed daily. Hinged instruments should be cleaned and sterilized in the open position. Discoloration and oxidation may occur if instruments are improperly cleaned. To increase the life of your instruments, clean them well. Use detergents and disinfectants suitable for use with medical and/or dental instruments. Follow manufacturers' instructions related to concentration and length of exposure.

Lubrication:

To increase the life of your instruments, routine lubrication is recommended. Prior to sterilization, lubricate instruments. This should be done at least weekly. Use only lubricants designed for precision hinged instruments. If using a dry heat sterilizer, be sure to use a lubricant that is compatible with the operating temperatures of your dry heat unit.

Sharpening:

Regular sharpening of your cutter will increase its service life, and its ability to cut more effectively. Frequency of sharpening depends on the frequency of use, as well as the types and diameters of wires on which the cutter is being used. Check cutters frequently to assess if sharpening is needed.

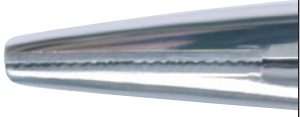

Sterilizing:

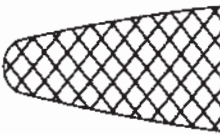

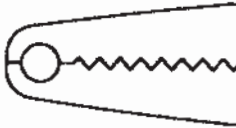

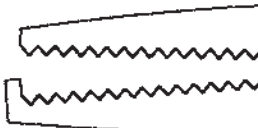

Instruments should be in the open position when sterilized. The most efficient method is steam autoclave. Orthodontic instruments are actually designed for use with steam autoclave. Steam autoclaves will not dull cutters. Other types of sterilizing methods include chemical vapor or dry heat. Using cold sterilants is not recommended. If used, they can chemically attack your instruments. All sterilizing units must be clean and operating properly.

Corrosion:

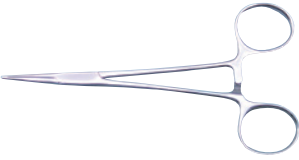

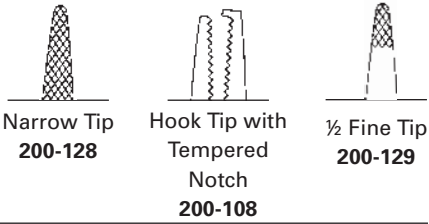

Orthodontic Instruments are very resistant to corrosion. You can prevent corrosion problems by properly following all manufacturers' recommendations. Discoloration may appear that may not be corrosion. Organic materials that remain can give the appearance of corrosion and be mistaken for rust. Never mix a corroded instrument with new instruments as oxidation may be spread to new instruments. It is recommended that a corroded instrument be discarded and replaced.

LIGATING INSTRUMENTS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Endura Plus Tungsten Carbide Deluxe Mathieu Pliers</p> <p>Our Tungsten Carbide Deluxe Mathieu Pliers feature a tungsten carbide tip made of a harder, more durable alloy than standard stainless steel so it resists wear while ensuring a firm grip and a longer life. Our special Safe-T-Lock Mathieu Pliers feature locking jaws placed forward of the handle to prevent the lock from pinching the skin or snagging, catching, and tearing gloves, while maintaining ease of use and comfort for doctors.</p>	
	<p>Endura Plus Mathieu Wide Tip — Tungsten Carbide Deluxe</p> <p>Wide tip Mathieu-style needle holder features serrated tips. Positive locking ratchet permits instant opening and closing. Very useful in ligating.</p>	201-101TC
	<p>Endura Plus Mathieu Narrow Tip — Tungsten Carbide Deluxe</p> <p>Narrow tip Mathieu-style needle holder has serrated tips. Positive locking ratchet permits instant opening and closing. Very useful in ligating.</p>	201-121TC
	<p>Endura Plus Mathieu Wide Tip — Tungsten Carbide Deluxe (Smaller 5" Size)</p> <p>Wide tip Mathieu-style needle holder features serrated tips. Positive locking ratchet permits instant opening and closing. Very useful in ligating.</p>	201-124
	<p>Endura Plus Mathieu Wide Tip with Safe-T-Lock — Tungsten Carbide Deluxe</p> <p>Wide tip Mathieu-style needle holder features serrated tips. Positive locking ratchet permits instant opening and closing. The Safe-T-Lock closure prevents gloves from interfering with closing mathieus. Very useful in ligating.</p>	201-125
	<p>Endura Plus Mathieu Narrow Tip with Safe-T-Lock — Tungsten Carbide Deluxe</p> <p>Has a Safe-T-Lock. Narrow tip Mathieu-style needle holder has serrated tips. Positive locking ratchet permits instant opening and closing. The Safe-T-Lock closure prevents gloves from interfering with closing mathieus. Very useful in ligating.</p>	201-126

ITEM	DESCRIPTION	CATALOG NO.
	<p>Endura Plus Mathieu Pliers</p> <ul style="list-style-type: none"> • Precision tips • Non-slip grip • Operator friendly • Smooth glide spring for consistent opening and closing 	
	<p>Endura Plus Mathieu Wide Tip</p> <p>Wide tip Mathieu-style needle holder features serrated tips. Positive locking ratchet permits instant opening and closing. Very useful in ligating.</p>	201-101
	<p>Endura Plus Mathieu Narrow Tip</p> <p>Narrow tip Mathieu-style needle holder has serrated tips. Positive locking ratchet permits instant opening and closing. Very useful in ligating.</p>	201-121
	<p>Endura Plus Mathieu Hole Tip</p> <p>Hole tip Mathieu-style needle holder features a groove at the tips for non-slip placement of elastic ligatures and other intraoral elastics.</p>	201-110
	<p>Endura Plus Mathieu Half-Fine Tip</p> <p>This fine tip Mathieu Pliers is excellent for placing elastic ligatures. Precision serrations offer a non-slip grip. 5½" long.</p>	201-123
	<p>Endura Plus Mathieu Hook Tip</p> <p>This hook tip Mathieu Pliers style needle holder has a notched tip for ease and assurance in placing elastics. Non-slip grip.</p>	201-118

LIGATING INSTRUMENTS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Mosquito Forceps Developed for ease and assurance in placing of elastic ligatures. Precision tips and locking handles provide a positive, non-slip grip.</p>	 <p>Narrow Tip 200-128</p> <p>Hook Tip with Tempered Notch 200-108</p> <p>½ Fine Tip 200-129</p>
	<p>Ligature Hemostat (Curved Tips) Doctors will appreciate this great option for ligature placement which aids in reaching the posterior teeth and helps compensate for awkward angles and hard-to-reach places. The Ligature Hemostat (Curved Tip) has a Mosquito handle with a secure locking mechanism and the precision tips are serrated for a non-slip grip.</p>	<p>200-128C</p>
	<p>E-Z Ligature Placer This metal-tipped tool makes application of elastic ligatures fast and easy. Place closed pliers' tip into ligature, pull ligature from cane, stick or ring, then squeeze pliers to stretch elastic open and apply ligature.</p>	<p>200-125</p>
	<p>Twirl-On Ligature Placer (Double-Ended) Made for the quick and easy ligation of elastic modules to bracket tie wings. A simple twist places the caned ligatures in position. The handle is approximately 3/16" making it lighter and easier to manipulate. (Use only with cut caned ligature ties.)</p>	<p>200-127</p>
	<p>Elastic Separating Pliers Angulated beaks for accessibility, ease, and accuracy. Grooved beaks assure positive hold for positioning elastics.</p>	<p>200-407</p>
	<p>Deluxe Elastic Separating Pliers Notched tips secure elastic and are angled for easy placement and easy release. A unique spring creates gentle force reducing fatigue. Rounded handles enhance comfort.</p>	<p>200-407D</p> 

DOUBLE-ENDED INSTRUMENTS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Carriere Wire Director and Opener The instrument assists in the opening and closing of the locking mechanism (cap) on the <i>Carriere</i> Self-Ligating Bracket while facilitating the seating of archwires into the bracket. Made from surgical grade stainless steel. The dual purpose design ensures ease of use while saving time by minimizing the change and number of instruments needed to install the appliance system. The instrument is completely autoclavable for sterilization.</p> 	<p>201-505</p>
<p>Elastic Remover Double-ended explorer designed for ease of ligature elastic removal. Special tempered tips.</p>		<p>200-109</p>
<p>Ligature Director (Double-Sided) Design features ligature "tie-spin" tip on one end, and ligature tucking on the other. All stainless steel construction.</p>		<p>200-201</p>
<p>Double-Ended Cement Spatula Full stainless steel material. One end is a cement mixing spatula, the other is designed for placing cement in preformed bands.</p>		<p>200-204</p>
<p>Schure Band Seater This design features a finely serrated band pusher on one end, and an all purpose scaler on the opposite end.</p>		<p>200-208</p>

DOUBLE-ENDED INSTRUMENTS

ITEM	DESCRIPTION	CATALOG NO.
------	-------------	-------------

OrthoLite™ Instruments

These high-quality stainless steel instruments are available in both 1/4" and 3/8" diameter handle size. Although the 3/8" diameter size is larger, it is lighter than the traditional 1/4" diameter handle. The handles provide comfort, control, and tactile sensitivity, which makes them feel like an extension of your hand. This relaxed grip reduces the likelihood that your hand will cramp and lowers the risk of carpal tunnel syndrome. The *OrthoLite* Instrument's working tips are precision manufactured to make the doctor's job faster and easier. These instruments are completely autoclavable.

	<p>Band Pusher Scaler</p> 	<p>201-500 • 1/4" Handle</p> <p>201-500W • 3/8" Handle</p>
	<p>Double-Ended Ligature Director</p> 	<p>201-501 • 1/4" Handle</p> <p>201-501W • 3/8" Handle</p>
	<p>Ligature Director Scaler</p> 	<p>201-502 • 1/4" Handle</p> <p>201-502W • 3/8" Handle</p>
	<p>Ligature Remover Director</p> 	<p>201-503 • 1/4" Handle</p> <p>201-503W • 3/8" Handle</p>

MISCELLANEOUS INSTRUMENTS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Extra-Heavy Wire Cutter Heavy duty wire cutter and an excellent lab tool for cutting heavy retainer wires. Cannot be heat sterilized.</p> <p>Maximum cutting capacity: archwires and retainer wires up to .060" (1.5 mm).</p>	200-412
	<p>Titanium Expander Adjusting Pliers Specifically designed for making precision adjustments to the <i>Nitanium Palatal Expander²</i> Appliance and <i>Nitanium Molar Rotator</i> Appliance. The grooved beaks assure a strong, non-slip hold during adjustment.</p>	200-450
	<p>Posterior Direct Bond Bracket Holder Designed for direct bonding of posterior teeth. Small head for excellent field of vision. Serrated tips for a positive grip.</p>	200-311
	<p>Distal Bender A necessity for every doctor. This tool has a long handle with an angled tube on one end. The angled tube is used to bend the archwire distal to the buccal tube to create an easy cinchback bend in an area which is usually very hard-to-reach. Made of strong stainless steel. The instrument is completely autoclavable.</p>	200-130
	<p>Shorty Twist Holder Precision-made holder. Simple insertion and locking of shorty ligature twists and shorty Koby twists. Makes tying ligatures fast and easy.</p>	200-428
	<p>Polar Bear Ice Instrument Thermally activated archwires can be chilled easily, quickly, and intraorally for easy placement of specific and difficult bends. The Polar Bear Instrument can be heat or cold sterilized.</p>	200-330

ITEM	DESCRIPTION	CATALOG NO.
<p>Bracket Placer/Slot Aligner</p> <p>Design features a bracket holder on one end and a slot aligner on the other. The slot aligner end fits into the bracket slot for accurate placement.</p>	 <p>Bracket Holder — Slot Aligner</p>	<p>200-322</p>
	<p>Delta Force Bracket Placing Tweezer/Slot Aligner</p> <p>Designed to fit the unique shape of all <i>Delta Force</i> Brackets. A notch on each side of the tip captures the angles on the bracket body just under the occlusal tie wings. This holds the bracket securely, without shifting, or risk of popping out. Tweezer tips rest just above the base flange, providing a firm surface to push against while seating the bracket. This reverse action tweezer also has a narrowed tip that can be placed in the archwire slot for aligning and adjusting.</p>	<p>200-322DF</p>
<p>Direct Bond Bracket Holder</p> <p>Unique reverse action tweezers with finely serrated beaks for a nonslip grip. Easy release of both metal and plastic direct bond brackets (fits narrow to wide twin).</p>		<p>200-309</p>
<p>Deluxe Bracket Holder</p> <p>Stainless steel holder is designed for accurate placement of anterior and posterior direct bond brackets and buccal tubes. Excellent field of vision. Unique reverse action tweezers with finely serrated beaks for a nonslip grip.</p>		<p>200-319</p>
<p>Buccal Tube Bonder</p> <p>A bracket-placing tweezer that is specifically customized for use on buccal tubes. The tips have the contour of our Easy Access Tweezer, giving it the size and angulation that facilitates access to the buccal region. Can also be used as a reverse action tweezer. It holds the buccal tube firmly when the tweezer is relaxed, and releases the buccal tube when pressure is applied.</p>	 	<p>200-324</p>

MISCELLANEOUS INSTRUMENTS

ITEM	DESCRIPTION	CATALOG NO.
<p>Tweezers/Slot Aligner</p> <p>The advantage these tweezers offer is the slot aligner (the slot aligner can be put in the bracket slot to align the bracket accurately). The tips of the tweezers are serrated for a firm grip of the bracket.</p>	 <p style="text-align: right;">Slot Aligner</p>	<p>200-314 • 5¼"</p> <p>200-315 • 6¼"</p>
<p>Easy Access Tweezers</p> <p>Finely pointed tips grip a buccal tube within the slot giving a firmer, more accurate placement. Tip contour allows maximum visibility.</p>		<p>200-323</p>
<p>Bracket Placing Tweezers</p> <p>Slim, precision-curved tips allow for an excellent field of vision while maintaining a firm grip to assure accurate bracket placement.</p>		<p>200-321</p>
<p>Swivel Head Bracket Height Gauge</p> <p>A sturdy stainless steel instrument with positions for four bracket height dimensions; 3.5, 4.0, 4.5 and 5.0 mm from the occlusal surface. Can be adjusted to facilitate easy use on anterior, cuspid, and bicuspid brackets as both ends have a hinge that allows the instrument to be angled to 45°. For use on .018" and .022" brackets.</p>		<p>200-223</p>
<p>Bracketizer™ Instrument</p> <p>An innovative, multi-functional tool designed for bracket placement and removal of excess adhesive. The bracket positioner features millimeter marks on the blades to facilitate bracket height, reducing bracket repositioning, and saving chair time. The adhesive remover aids in accurate bracket coordination. The <i>Bracketizer</i> Instrument is small enough to fit between the tie wings for bracket alignment, making it the perfect instrument for small-sized brackets, such as our popular <i>Mini-Twin</i> Brackets.</p>		<p>200-329</p>

ITEM	DESCRIPTION	CATALOG NO.
<p>Bracket Height Gauge Similar to the Boone Gauge but in a straight, double-ended design. Accurately measures height of bracket on tooth from the incisal edge. Gauge has 3.5 mm, 4.0 mm, 4.5 mm and 5.0 mm marks.</p> 	<p>Metal, .018" Slot Size Metal, .022" Slot Size Plastic, .018" Slot Size Plastic, .022" Slot Size</p>	<p>200-218 200-222 200-218P 200-222P</p>
	<p>Boone Bracket Position Gauge This unique gauge is placed on the incisal/occlusal surface of the tooth to simplify bracket positioning. Measures 3.5 mm, 4.0 mm, 4.5 mm and 5.0 mm.</p>	<p>200-427</p>
	<p>Gram Gauge (25-250 grams) Precision-made instrument allowing accurate readings of rubber bands and coil springs.</p>	<p>200-202</p>
<p>Dontrix Gauge Precision instrument designed to accurately measure orthodontic forces. Measures one ounce increments up to 16 ounces.</p> 		<p>200-424</p>
<p>Boley Gauge Designed for accessibility and ease. Measures in millimeters. Curved and pointed beaks facilitate accurate measurements.</p> 		<p>200-408</p>
<p>Deluxe Boley Gauge Easy to use, sturdy, and dependable. The slide moves smoothly and easily, yet holds its position when released to maintain accurate measurements. The tips are curved and precision shaped to confidently locate and hold points for measurement — intraorally, or on a study model. The front and back are marked with scales; both marked in millimeters up to 80 mm, with large marks and numbers to denote every 10 mm.</p> 		<p>200-408D</p>

One drop after each sterilization cycle is all that is needed to help extend instrument life, and to maintain smooth and proper operation.</p>	<p>600-123 (1/2 oz) 600-124 (4 oz)</p>

INSTRUMENT WARRANTY POLICY

Warranty Policy: *Ortho Organizers* warrants instruments to be free from any defect in material or workmanship, corrosion, or separation or fracture of inserts for a period of one (1) year from the date of purchase.

Ortho Organizers warrants Mathieu instruments to be free from any defect in material or workmanship, corrosion, or separation or fracture of inserts for a period of ninety (90) days from the date of purchase.

Failure to follow all recommended use, maintenance, care and cleaning procedures will void warranty claims. Proof of recommended maintenance may be required where applicable.

- Care and Cleaning:** All recommended care, cleaning and sterilization procedures, as described in these Instructions for Use, must be fully adhered to. Failure to follow the recommended procedures will void the warranty. The use of rust inhibitor and silicone lube in the instruments' joints is required after each cleaning and sterilization.
- Recommended Maintenance:** Warranty does not include normal routine maintenance. All instruments should be reconditioned and re-sharpened every six (6) months. *Ortho Organizers* will resharpen or replace at no cost any cutting instruments which fail to properly cut their intended wire sizes within the first six (6) months of purchase.

Except as expressly provided above, there are no other warranties on *Ortho Organizers* instruments, expressed or implied, with regards to description, quality, merchantability, or fitness for a particular purpose. The liability for any warranty claim shall not exceed the purchase price of the instrument that is the basis of such claim.

- Warranty Returns:** Instruments which are defective under the terms of the warranty policy, and have not been misused or tampered with, may be returned to *Ortho Organizers* for repair or replacement at *Ortho Organizers*' option. Contact *Ortho Organizers* and obtain a Return Material Authorization (RMA) number prior to returning the pliers by calling Customer Service at 1-800-547-2000. Once an RMA number is assigned, ship the product with this RMA number visible on the outer shipping package, along with the original invoice or packing slip, to *Ortho Organizers* Inc., 1822 Aston Avenue, Carlsbad, CA 92008-7306. Please note that an RMA number is mandatory, and any product received by *Ortho Organizers* without an RMA number visible on the packaging will not be accepted.
- Routine Maintenance and Non-Warranty Repairs:** Do not send instruments directly to us for routine maintenance, sharpening, or reconditioning six (6) months after purchase or later. Normal maintenance, including re-sharpening and reconditioning, may be obtained at:

Henry Schein® Pro Repair • (800) 367-3674 1666 East Touhy Avenue • Des Plaines, IL 60018 • www.prorepair.com • prorepair@henryschein.com

Alternative maintenance providers may also be used. *Ortho Organizers* does not warrant actions by any maintenance service providers, and assumes no responsibility for the results of any maintenance services performed by any maintenance services performed.

RIOFOTO Rhodium Coated Intraoral Photography Mirrors

Improve Your Image

All photographic mirrors are not the same. Mirrors coated with Rhodium, a silvery white precious metal, provide clearer, brighter images that will produce higher quality dental pictures. Superior quality pictures are an excellent tool to help improve clinical effectiveness as they may be used to promote patient education and help explain why major restorative treatment is necessary. They also provide documentation for patient records, insurance claims and case presentations to colleagues. A quality picture really is worth a thousand words!

Quality Features Include:

Highest Reflectivity

Clear, sharper images with Rhodium coated mirrors

Up to 10% more reflectivity than chrome mirrors

Up to 20% more reflectivity than metal mirrors

Highest Quality

Dual-sided mirror meaning twice the life of one sided mirrors

More durability from flatter, higher quality substrate, which allows better adhesion of Rhodium coating to provide outstanding wear resistance

Able to withstand repeated autoclave cycles up to 350°F/180°C

Patient Comfort

Thicker mirrors with rounded corners make these more comfortable in the patient's mouth

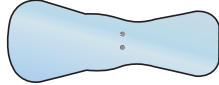

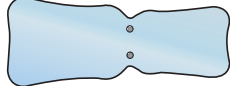

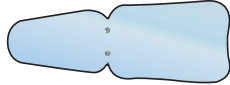

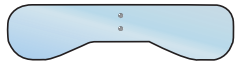

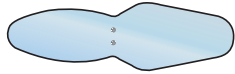

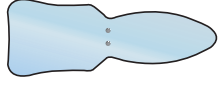

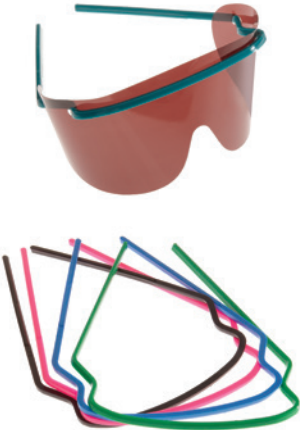

Both adult and pediatric sizes - makes it easy to pick the right shape for your patient

PATIENT EDUCATION MATERIALS

ITEM	DESCRIPTION	CATALOG NO.
	<p>Welcome to the World of Orthodontics III</p> <p>A comprehensive guide for the orthodontist and staff regarding the practical day-to-day issues involved in office management. It is an excellent tool for training orthodontic assistants. The original version, written in the 1970's by Dr. James M. Reynolds, was often requested and frequently recommended by professional associations, even when it was out of print. This updated version retains the practical tips from the original, but now includes modern techniques and technology of the 21st century. A must for any office library, this version is co-authored by Dr. Reynolds and Dr. Larry White. 352 pages.</p>	<p>Z-200-01</p>
	<p>It's Up To You®</p> <p>Child – It's Up To You Child – It's Up To You – Personalized The "It's Up to You" booklet for younger patients continues to be the most popular instructional booklet sold by us. These booklets can be personalized on the cover with pertinent office information and logos. The children's booklet is 8.5" x 11" and entertains while it educates.</p> <p>Adult – It's Up To You Adult – It's Up To You – Personalized Our adult booklet is a more convenient pamphlet size 4" x 8.5" but offers the same answers needed for successful, compliant treatment of the mature patient. It may also be personalized when purchased in minimum quantities of 100.</p> <p>Spanish – It's Up To You Spanish – It's Up To You – Personalized The Spanish language version of the "It's Up To You" informational guide. This booklet is available in black and white only and may be personalized.</p>	<p>Z-100-09 Z-100-09-P</p> <p>Z-100-08 Z-100-08-P</p> <p>Z-100-05 Z-100-05-P</p>
	<p>Facts</p> <p>Our revised editions of "Facts About . . . Orthodontics" are filled with colorful photographs. Both versions contain before and after photographs that dramatically illustrate the effects and benefits of orthodontic treatment. Presented in a question and answer format, the most frequently asked questions are addressed. The children's version answers many of the questions a parent might have before taking a child to the orthodontist. May be personalized.</p> <p>Adult's Facts Adult's Facts – Personalized</p> <p>Children's Facts Children's Facts – Personalized</p>	<p>Z-110-10 Z-110-10-P</p> <p>Z-110-11 Z-110-11-P</p>

EDUCATIONAL COURSES

Henry Schein Dental Specialties Group (HSDSG) joins with its partner companies to offer a wide variety of certified continuing education programs across all dental specialty fields:

- Orthodontics
- Periodontics
- Oral Surgery
- Pedodontics
- Endodontics

Our mission as a provider of scientifically sound continuing education is to increase the knowledge base of all Dental Professionals allowing them to expand treatment options for their patients. By providing premium comprehensive training programs we ensure our participants remain up to date on new technologies, and continue to achieve their learning potential.

Henry Schein Dental Specialties Group is a recognized provider for both the AGD and the ADA Continuing Education Recognition Program.

For additional information or to receive a full course calendar please visit our website at HenryScheinDSG.com or contact us directly at 888.994.7374 (888.99 HSDSG).

 **HENRY SCHEIN**[®]
DENTAL SPECIALTIES GROUP

ADA C-E-R-P[®] | Continuing Education Recognition Program

Henry Schein Dental Specialties Group is an ADA CERP Recognized Provider. ADA CERP is a service of the American Dental Association to assist dental professionals in identifying quality providers of continuing dental education. ADA CERP does not approve or endorse individual courses or instructors, nor does it imply acceptance of credit hours by boards of dentistry.

Henry Schein Dental Specialties Group designates this activity for 64 continuing education credits.

Approved PACE Program Provider
FACD/MAGD Credit Approval does not imply acceptance by a state or provincial board of dentistry or AGD endorsement. 6/1/2011 to 5/31/2015
Provider ID#208344

EDUCATIONAL COURSES

Obstructive Sleep Apnea (OSA) is emerging as one of the most widespread and costly health issues in the U.S. OSA is known to affect more than 18 million Americans, including children, 85% of whom are undiagnosed.* OSA is known to raise a person’s risk of serious medical problems such as:

- heart attack
- stroke
- depression
- hypertension
- auto-immune disorders

An Orthodontic Approach

Henry Schein Orthodontics (HSO) now offers a course that will provide you with an understanding of the physiology of sleep apnea and the current diagnostic and treatment options, including new orthodontic approaches and protocols for treating patients with OSA. This program is the first-of-its-kind in the orthodontic industry, and includes a complete, evidence-based system to implement into your practice now.

A complete evidence-based system to implement into your practice.

- Make a total-health difference and help your patients breathe, smile, and thrive!
- Grow your practice through referrals (patients and physicians) and community marketing.

WE PROVIDE SUPPORT EVERY STEP OF THE WAY:
Our robust integration tools, training, and support system provides you the resources to successfully add sleep apnea treatment into your practice!

*Courses available in the U.S. only.

Course Objectives

This course is designed to give you the knowledge and skills to effectively incorporate an Orthodontic Obstructive Sleep Apnea program into your practice. During the course, you will learn:

- The physiology of snoring and sleep-disordered breathing
- Clinical signs and screening methods for identifying obstructive sleep apnea
- Obstructive sleep apnea diagnostic procedures, including new home sleep testing options
- How the orthodontic strategy differs from conventional treatment options
- The role of mandibular positioning and maxillary arch development in airway management
- Partnering with health care professionals for comprehensive care and new referral sources
- Medical insurance billing made easy

Teaching Methods and Tools

Our program includes training methods such as lecture, video, interactive group discussion, and hands-on exercises with FDA-cleared obstructive sleep apnea oral appliances and home sleep testing therapy. A complete system of Orthodontic OSA tools and protocols, patient education, and professional referral materials will be available and demonstrated.

Visit OrthoSleepApnea.com to find a complete course schedule and how you can register today.

EDUCATIONAL COURSES

Products

In addition to continuing education courses, HSO also offers the following products to help implement and manage an orthodontic sleep apnea program within your practice. Please consult your local HSO Representative for more details.

HOME SLEEP TESTING

FDA-cleared, portable devices designed to detect the symptoms of obstructive sleep apnea and aid in treatment follow-up. Devices are easy-to-use and testing can be done in the comfort of your patient's own home.

MEDICAL BILLING SOFTWARE

Maximize reimbursement success and minimize risk with easily-generated documentation, reports, and letters to organize and manage your sleep practice and bill medical insurance.

- Facilitates patient questionnaire and examinations
- Diagnostic report writing and manages referral process
- Automated claims and medical billing submissions
- Patient benefits calculator

PATIENT EDUCATION AND MARKETING

- Sleep appliance demonstration models
- Patient awareness and education materials
- In-practice and community outreach marketing

SUPPLIES FOR YOUR GROWING SLEEP APNEA PROGRAM

Restock your inventory with the following items:

- Home SleepTest patient consumables
- Bite registration devices specifically designed for sleep apnea appliances
- Patient education brochures

*Courses available in the U.S. only.

CONDITIONS OF SALE

Products may be returned for credit within 60 days of shipping only under the following conditions:

1. Product must be new, in sellable condition, and in the original unopened packaging.
2. **Custom product such as bands and bonding bases with welded or brazed combinations, Doctor's specials, and refrigerated products may not be returned for exchange or credit at any time.**
3. Product will be accepted only from the original purchaser and only when delivered to our Carlsbad, California U.S.A. Headquarters.
4. Returned merchandise must be shipped pre-paid and insured for the full value. Never return merchandise in an envelope.
5. Returned merchandise must be accompanied with a Return Material Authorization (RMA) Number and note explaining the reason for the return.
6. Products returned for credit will be subject to a minimum 15% handling and restocking charge. Items returned after 60 days of shipping will be accepted at the discretion of Henry Schein Orthodontics. No product will be accepted for return if shipping date is beyond one (1) year.
7. *Henry Schein Orthodontics* representatives are not authorized to approve or pick up return merchandise. Please contact *Henry Schein Orthodontics* to get a RMA Number by calling Customer Service at 1.800.547.2000. Once you have your RMA Number, please return your product with your RMA Number referenced on the packaging to:

Henry Schein Orthodontics, Attn: Returns
1822 Aston Avenue
Carlsbad, CA 92008-7306

SHIPPING AND HANDLING

All prices are F.O.B. shipping point. Shipping and handling charges and sales tax (if applicable) will be added to invoices.

ORDER TERMS AND CONDITIONS

Orders are accepted on basis of payment within 30 days after shipment from factory, subject to credit approval. A packing slip is enclosed with each shipment and a separate invoice is sent by First Class Mail. Any outstanding balance not paid within 30 days will be subject to a finance charge of 1.5% per month, an amount equal to 18% per year. Payment may be made by check, VISA, MasterCard, American Express, or Discover Card. All payments are made to our U.S.A. headquarters and must be in U.S. funds.

PRODUCT IMPROVEMENTS, PRICE, AND TECHNIQUE CHANGES

Our commitment is to continually advance and improve our products. Therefore, we reserve the right to upgrade the design and quality of the products we produce and sell. We also reserve the right to change prices and/or design, or discontinue products without prior notice.

Changes in technique, archwire size, brackets or band preferences (i.e., *Tempra* Bands for *Epic* Bands) will be accepted for exchange only if product is new, in sellable condition, and in the original unopened packaging, a non-custom product, and returned from the original purchaser within one (1) year of shipping date. Note: your dollar cost of every order of new but similar products will be reduced by 50% on minimum orders of \$500.00 (reflecting the value of your exchanged products), until the full amount of your exchanged product has been exhausted against orders. A 15% service charge will be assessed to cover the cost of inspection, re-stocking or re-packaging.

WARRANTIES

Ortho Organizers, Inc. sole obligation and the customer's sole remedy in the event of any claimed defect shall be limited to replacement of merchandise, or at *Ortho Organizer's* option, refund of the purchase price. ALL IMPLIED WARRANTIES, INCLUDING IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR USE ARE DISCLAIMED. *Ortho Organizers* must be contacted for a Return Material Authorization (RMA) Number and a written notice of claimed defect must be sent to Henry Schein Orthodontics, Attn: Returns, 1822 Aston Avenue, Carlsbad, CA 92008-7306 within a reasonable time after discovery not to exceed one (1) year from the date of delivery.

Band and Brackets

All bands and brackets are warranted for Single Patient Use Only. We cannot warranty, under any circumstances, bands or brackets which have been recycled.

INSTRUMENTS

Ortho Organizers Endura Plus Pliers Warranty Policy

Ortho Organizers warrants *Endura Plus* Instruments to be free from any defect in material or workmanship, corrosion, or separation or fracture of inserts for a period of one (1) year from the date of purchase. Failure to follow all recommended use, maintenance, care, and cleaning procedures will void warranty claims. Proof of recommended maintenance may be required where applicable.

Care and Cleaning

For *Endura Plus* Instruments, all recommended care, cleaning, and sterilization procedures, as described in the Instructions for Use, must be fully adhered to. Failure to follow the recommended procedures will void the warranty. For *Endura Plus* Instruments, the use of rust inhibitor and silicone lube in the pliers' joints is required after each cleaning and sterilization.

Recommended Maintenance

Warranty does not include normal routine maintenance. All *Endura Plus* Instruments should be reconditioned and re-sharpened every six (6) months. *Ortho Organizers* will re-sharpen or replace at no cost any *Endura Plus* Cutting Pliers which fail to properly cut their intended wire sizes within the first six (6) months of purchase.

WARRANTIES AND CLEANING

Except as expressly, provided above, there are no other warranties on *Ortho Organizers Endura Plus* Instruments, expressed or implied, with regards to description, quality, merchantability, or fitness for a particular purpose. The liability for any warranty claim shall not exceed the purchase price of the instrument that is the basis of such claim.

STERILIZATION RECOMMENDATIONS

For *Endura* Instruments, dry heat sterilization is best suited for destroying live microorganisms and is the recommended sterilization method. **DO NOT AUTOCLAVE ENDURA Plus Instruments!** This method ensures long life for insert-tipped instruments because there is no moisture, pressure, or chemicals involved. Many quick-cycle dry heat units do not cause metallurgical damage because they operate within reasonable temperature levels. Heat sterilization instruments should be dried while hot to prevent corrosion. Important: Wipe clean pliers and instruments thoroughly before sterilizing.

IMMERSION DISINFECTION AND STERILIZATION

We recommend the use of cleaning products that contain a rust inhibitor that has been proven safe for carbon steel. **Never immerse pliers in:** Glutaraldehydes with phenols, iodophor surface disinfectants; Chorinedioside, Sodium hypochlorite compounds or water.

Stainless steel should not be exposed to the following chemicals: Sodium Hypochlorite (household bleach), Tartaric Acid (stain and tartar remover), Aluminum Chloride, Barium Chloride, Bichloride of Mercury, Calcium Chloride, Carboic Acid, Chlorinated Lime, Citric Acid, Dakin's Solutions, Ferrous Chloride, Lysol, Mercuric Chloride, Mercury Salts, Phenol, Potassium Permanganate, Potassium Thiocyanate or Stannous Chloride. Also, NEVER use Aqua Regia, Ferric Chloride, Sulfuric Acid or Iodine with stainless steel.

Immersion of pliers for the shortest time (within manufacturer's guidelines), will minimize chemical exposure and still retain effectiveness. Avoid metal-to-metal contact of pliers' tips when loading trays. Lubricate hinge joints each week with a quality, pure silicone lubricant.

ORTHO ORGANIZERS' TRIUMPH INSTRUMENT WARRANTY POLICY

Triumph Orthodontic Instruments provide warranty against material defects and craftsmanship for the life of the product. Cutters are guaranteed for seven (7) years, benders and utility pliers for ten (10) years, and Mathieu Pliers are guaranteed for one (1) year. This covers corrosion, joint failure, and breakage under normal use. Proper cleaning and maintenance is required to maintain the warranty. This warranty may be void if instruments are not properly cared for, including cleaning and lubrication. *Ortho Organizers* reserves the right to decide whether an instrument is to be repaired or replaced. Sharpening cutters and repairing minor tip damage is not covered by warranty as it is considered routine maintenance for normal use.

Cleaning

Clean and remove any bulk debris immediately after use. Use an enzymatic cleaning solution in an ultrasonic cleaner to clean instruments. Your ultrasonic solution should be changed daily. Hinged instruments should be cleaned and sterilized in the open position. Discoloration and oxidation may occur if instruments are improperly cleaned. To increase the life of your instruments, clean them well. Use detergents and disinfectants suitable for use with medical and/or dental instruments. Follow manufacturer's instructions related to concentration and length of exposure.

Lubrication

To increase the life of your instruments, routine lubrication is recommended. Prior to sterilization, lubricate instruments. This should be done at least weekly. Use only lubricants designed for precision hinged instruments. If using a dry heat sterilizer, be sure to use a lubricant that is compatible with the operating temperatures of your dry heat unit.

Sharpening

Regular sharpening of your cutter will increase its service life, and its ability cut more effectively. Frequency of sharpening depends on: the frequency of use, as well as, the types and diameters of archwires on which the cutter is being used. Check cutters frequently to assess if sharpening is needed.

Sterilizing

Instruments should be in the open position when sterilized. The most efficient method is steam autoclave. *Triumph* Orthodontic Instruments are actually designed for use with steam autoclave. Steam autoclaves will not dull cutters. Other types of sterilizing methods include chemical vapor or dry heat. Using cold sterilants is not recommended. If used, they can chemically attack your instruments. All sterilizing units must be clean and operating properly.

Corrosion

Triumph Orthodontic Instruments are very resistant to corrosion. You can prevent corrosion problems by properly following all manufacturers' recommendations. Discoloration may appear that may not be corrosion. Organic materials that remain can give the appearance of corrosion and be mistaken for rust. Never mix a corroded instrument with new instruments as oxidation may be spread to new instruments. It is recommended that a corroded instrument be discarded and replaced.

Routine Maintenance and Non-Warranty Repairs

Do not send pliers to *Ortho Organizers* for routine maintenance, sharpening, or re-conditioning six (6) months after purchase or later. Normal maintenance, including re-sharpening and reconditioning, may be obtained at Henry Schein Pro Repair (Please see Warranty Returns below for contact information).

WARRANTIES, PATENTS, AND TRADEMARKS

WARRANTY RETURNS FOR ALL ORTHODONTIC INSTRUMENTS

Pliers which are defective under the terms of the warranty policy, and have not been misused or tampered with, may be returned to *Ortho Organizers* for repair or replacement at *Ortho Organizers* option. Contact *Ortho Organizers* and obtain a Return Material Authorization (RMA) number prior to returning the pliers by calling Customer Service at 1.800.547.2000. Once an RMA Number is assigned, ship the product with this RMA Number visible on the outer shipping package, along with the original invoice or packing slip, to Ortho Organizers, Inc., 1822 Aston Avenue, Carlsbad, CA 92008-7306. Please note that an RMA Number is mandatory, and any product received by *Ortho Organizers* without an RMA Number visible on the packaging will not be accepted. Routine Maintenance and Non-Warranty Repairs: Do not send *Endura Plus* Instruments or *Triumph* Instruments to *Ortho Organizers* for routine maintenance, sharpening, or re-conditioning six (6) months after purchase or later. Normal maintenance, including re-sharpening and reconditioning, may be obtained at:

HENRY SCHEIN PRO REPAIR

1666 East Touhy Avenue
Des Plaines, IL 60018
Phone: 800.367.3674
Web: www.prorepair.com
Email: prorepair@henryschein.com

Alternative maintenance providers may also be used.

Ortho Organizers does not warrant actions by any maintenance service providers, and assumes no responsibility for the results of any maintenance services performed.

NON-WARRANTY REPAIRS

For non-warranty repairs and sharpening, please contact Precision Plier Service.

WARNING

Many of *Ortho Organizers/ Henry Schein Orthodontics'* products are made of stainless steel and/or nickel titanium. Stainless steel contains nickel and chromium. Nickel titanium contains nickel. Also cobalt-chromium contains chromium and a trace of nickel. A small percentage of the population is known to be allergic to these metals. If an allergic reaction occurs, advise patient to consult a physician.
